This new book addresses a
gap in the literature, offering
an explanation of the
aurora's causes, how the
occurrence of major events
may now be predicted, and
how amateur observers can
go about recording displays.
This is the first serious book
about aurora written for
practical but non-
professional observers. It
provides a concise accessible
description of the various
auroral forms and how to
record them, illustrated with
color images of recent
displays. It contains details of
'Space Weather' forecasting
websites, how to interpret
and use the information
given on these, and how to
anticipate auroral activity.
