Container loads are loads that are rigged for airdrop in airdrop containers such as the A-7A cargo sling, the A-21 cargo bag, and the A-22 cargo bag. In addition, flat steel strapping is used to rig container loads. The containers are packed with supplies, disassembled equipment, or small items of ready-to-use equipment prepared for airdrop. The container load requires cushioning material such as honeycomb, felt, or cellulose wadding, depending on the load requirements and the method of airdrop. The number and types of parachutes required to stabilize and retard the descent of the load depends on the type of container used, the weight of the load, and the type of airdrop.
