This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates

how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms.

Russian businesses in the post-Soviet period have been noted for their unusual, sometimes allegedly corrupt, business practices, and for their role in the enrichment of oligarchs. This book, which includes a wide range of case study examples, and which draws on the author's first-hand experience of running a Russian company, argues that a key to understanding contemporary Russian business is the importance of arbitrage, that is the ability to take advantage of price and cost differentials in different markets. The book argues that the conditions for such arbitrage advantages are often created by businesses which have special links to particular institutions; that arbitrage benefits are not available to all businesses in a sector, thereby providing unfair competitive advantages to some businesses; and that businesses' overall activities are often distorted by this system. The book includes an analysis of a wide range of different types of arbitrage activities in action.

This book criticizes the widespread view that the 1997 Asian crisis was due to 'crony capitalism' and puts the blame instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization.
