Women with germline mutations in the

breast and ovarian cancer gene I (Brcal) have an approximately 50% lifetime of developing ovarian cancer and almost 90% chance of breast cancer. Brcal mutations account for a significant percentage of all breast cancer cases. It appears that the main role for the Brcal protein in cells is

to prevent the accumulation of mutations in key growth regulatory genes in response to DNA damage. BRCAL is phosphorylated in response to DNA damage by an elaborate surveillance mechanism called a checkpoint, which detects DNA damage and prevents the accumulation of mutation. We are investigating the

role these phosphorylation events play in the regulation of BRCAL. We have mapped phosphorylation sites and will mutate them to determine their function. We are also planning to investigate the mechanism through with the BRCAL protein localizes to sites of DNA damage within

cells.

This book examines the relationship that exists between fantasy cinema and the medium of animation. Animation has played a key role in defining our collective expectations and experiences of fantasy cinema, just as fantasy storytelling has often served as inspiration for our most popular animated film and television. Bringing together contributions from world-renowned film and media scholars, *Fantasy/Animation* considers the various historical, theoretical, and cultural ramifications of the animated fantasy film. This collection

provides a range of chapters on subjects including Disney, Pixar, and Studio Ghibli, filmmakers such as Ralph Bakshi and James Cameron, and on film and television franchises such as Dreamworks' How To Train Your Dragon (2010 –) and HBO's Game of Thrones (2011 –).

Visit us online at <http://www.mcp.com/mgr/macmillan> an Business Rankings Annual Bloomsbury Publishing Baseball is a readily quantifiable sport, and baseball historians, journalists and front office personnel often use sabermetric statistics to rank the performance of a particular player or team. To many, these statistics can be intimidating and unwieldy, and the reliance on numerical data to explain a cherished pastime often meets with skepticism and confusion.

For researchers and for serious fans, however, the truth is in the numbers, and statistical rankings offer an easy and accurate way to understand the game. Covering almost a decade and a half, this work scrutinizes statistics from both leagues and proves just how useful and straightforward numerical rankings can be. It examines pitching, offense, defense, and competition based on the information reflected in various stats. Many of these figures are explained, simplifying seemingly complex metrics while illuminating 14 years

of baseball. Twelve appendices cover topics ranging from fielding averages, starting pitchers' won-loss records and leading closers' saves versus blown saves to total team offensive efficiency, and quarterly standings in divisional races.

“ A reference book in this area of EU competition law and a must-have companion for academics, enforcers and practitioners alike, as

well as EU and national judges.” Judge Nils Wahl, Court of Justice of the European Union This seminal text offers an authoritative and integrated treatment of the legal and economic principles that underpin the application of Article 102 TFEU to the behaviour of dominant firms. Traditional concerns of monopoly behaviour, such as predatory pricing, refusals to deal, excessive pricing, tying and bundling, discount

practices and unlawful discrimination are treated in detail through a review of the applicable economic principles, the case law and decisional practice and more recent economic and legal writings. In addition, the major constituent elements of Article 102 TFEU, such as market definition, dominance, effect on trade and applicable remedies are considered at length. The third edition involves a net addition of over 250 pages, with a substantial

new chapter on Abuses In Digital Platforms, an extensively revised chapter on standards, and virtually all chapters incorporating substantial revisions reflecting key cases such as Intel, MEO, Google Android, Google Shopping, AdSense, and Qualcomm.
