Specifically designed as an

introduction to the exciting world of engineering, ENGINEERING FUNDAMENTALS: AN INTRODUCTION TO ENGINEERING encourages students to become engineers and prepares them with a solid foundation in the fundamental principles and physical laws. The book begins with a discovery of what engineers do as well as an inside look into the various areas of specialization. An explanation on good study habits and what it takes to succeed is included as well as an introduction to design and problem solving, communication, and ethics. Once this foundation is established, the book moves on to the basic physical concepts and laws that students will

---

encounter regularly. The framework of this text teaches students that engineers apply physical and chemical laws and principles as well as mathematics to design, test, and supervise the production of millions of parts, products, and services that people use every day. By gaining problem solving skills and an understanding of fundamental principles, students are on their way to becoming analytical, detail-oriented, and creative engineers. vehicle systems approach, and is intended as a graduate text as well as a reference for scientists and engineers involved in the design of automotive mechatronic control systems. As the complexity of automotive vehicles increases, so does the dearth of high competence, multi-disciplined automotive scientists and engineers. This book provides a discussion into the type of mechatronic control systems found in modern vehicles and the skills required by automotive scientists and engineers working in this environment. Divided into two volumes and five parts, Automotive Mechatronics aims at improving automotive mechatronics education and emphasises the training of students' experimental hands-on abilities, stimulating and promoting experience among high education institutes and produce more automotive mechatronics and automation engineers. The main subject that are treated are: **VOLUME I:** RBW or XBW unibody or chassis-motion mechatronic control hypersystems; DBW AWD propulsion mechatronic control systems; BBW AWB dispulsion mechatronic control systems; **VOLUME II:** SBW AWS conversion mechatronic control systems; ABW AWA suspension mechatronic control systems. This volume was developed for undergraduate and postgraduate students as well as for professionals involved in all disciplines related to the design or research and development of automotive vehicle dynamics, powertrains, brakes, steering, and shock absorbers (dampers). Basic knowledge of college mathematics, college physics, and knowledge of the functionality of automotive vehicle basic propulsion, dispulsion, conversion and suspension systems is required.

Solar system exploration is that grand human endeavor which reaches out through interplanetary space to discover the nature and origins of the system of planets in which we live and to learn whether life exists beyond Earth. It is an international enterprise involving scientists, engineers, managers, politicians, and others, sometimes working together and sometimes in competition, to open new frontiers of knowledge. It has a proud past, a productive present, and an auspicious future. This survey was requested by the National Aeronautics and Space Administration (NASA) to determine the contemporary nature of solar system exploration and why it remains a compelling activity today. A broad survey of the state of knowledge was requested. In addition NASA asked for the identification of the top-level scientific questions to guide its ongoing program and a prioritized list of the most promising avenues for flight investigations and supporting ground-

based activities.

Family-Centred Assessment and Intervention in Pediatric Rehabilitation analyzes the effectiveness of Family-Centred Services (FCS) for children with disabilities or chronic illnesses. This text provides you with the exact definition of FCS and offers proof that parent involvement in children's treatment greatly enhances therapy. You can use the suggestions and methods to integrate parents into therapy, maximizing the family's intervention experiences and making your work more successful and effective. Many clinicians agree that families play a crucial part in deciding what intervention strategies are best for their children. From this text, you will learn that listening to parents and valuing parental input

will give you insight into the goals, needs, and ambitions families have for their children. This enables you to choose, with the parent, the interventions that best suit your patients' needs and the needs of their families. In addition to information on how to integrate parents and families into intervention, Family-Centred Assessment and Intervention in Pediatric Rehabilitation offers suggestions that will improve your existing FCS or help you implement a family-centred approach, including: performing therapy in natural settings, such as school or home, to make changes in the children's social and physical environments acknowledging the grieving and adaptation process of families while being compassionate and understanding letting parents describe what they would like their child to be able to do and accomplish in the future putting the parents' concerns and requests first, enabling parents to deal with caring for their child supporting parents and reinforcing them when they have innovative and helpful ideas informing parents on the progress of their children and educating parents on methodologies and strategies used in FCS Many of the suggestions derived from the analysis of current data and original research in Family-Centred Assessment and Intervention in Pediatric Rehabilitation have immediate clinical applicability, allowing you to quickly adapt methods into your intervention processes. This text also provides you with information on types of evaluative methods, such as Measure of Processes of Care (MPOC) and Family-Centred Program Rating Scale (Fam PRS), that will help you determine if your FCS program is working efficiently. Emphasizing the goal of parent
