Solar system exploration is that grand human endeavor which reaches out through interplanetary space to discover the nature and origins of the system of planets in which we live and to learn whether life exists beyond Earth. It is an international enterprise involving scientists, engineers, managers, politicians, and others, sometimes working together and sometimes in competition, to open new frontiers of knowledge. It has a proud past, a productive present, and an auspicious future. This survey was requested by the National Aeronautics and Space Administration (NASA) to determine the contemporary nature of solar system exploration and why it remains a compelling activity today. A broad survey of the state of knowledge was requested.

In addition NASA asked for the identification of the top-level scientific questions to guide its ongoing program and a prioritized list of the most promising avenues for flight investigations and supporting ground-based activities.

This study offers a first comprehensive synchronic account of the Present-day English gerundial system. Most synchronic studies of gerunds have hitherto focused on the verbal gerund, scrutinizing its categorial status or comparing it with other non-finite clausal structures. A systematic comparison with its nominal counterpart, however, is lacking. Based on a detailed empirical analysis of lexico-grammar and semantics, this study develops an innovative cognitive-constructionist model of the English gerund system which depicts the usage profiles of nominal and verbal gerunds in terms of probabilistic trends rather than by means of categorial labels. It is shown that a better understanding of the functioning of the English gerund system requires a description that operates on multiple levels, accounting for both

the abstract construal gerunds can impose on an event as well as the token-level constraints on variation between the two gerund types. This multifaceted approach, it is argued, not only offers a new perspective on the configuration of ing-forms in Present-day English, it can also be of relevance to the description of other complex grammatical structures.

In *The Wild Irish Girl*, the powerful Irish heroine's marriage to a heroic Englishman symbolizes the Anglo-Irish novelist Lady Morgan's re-imagining of the relationship between Ireland and Britain and between men and women. Using this most influential of pro-union novels as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps out the genealogy of this development, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s. Tracy's model enables him to elaborate the ways in which gender ideals are specifically contested in fiction, the discourses of political debate and social reform, and the popular press, for the purpose of defining not only the place of the Irish in the union with Great Britain, but the nature of Britishness itself.
