In this volume of 15 articles, contributors from a wide range of disciplines present their analyses of Disney movies and Disney music, which are mainstays of popular culture. The power of the Disney brand has heightened the need for academics to question whether Disney ' s films and music function as a tool of the Western elite that shapes the views of those less empowered. Given its global reach, how the Walt Disney Company handles the role of race, gender, and sexuality in social structural inequality merits serious reflection according to a number of the articles in the volume. On the other hand, other authors argue that Disney productions can help individuals cope with difficult situations or embrace progressive thinking. The different approaches to the assessment of Disney films as cultural artifacts also vary according to the theoretical perspectives guiding the interpretation of both overt and latent symbolic meaning in the movies. The authors of the 15 articles encourage readers to engage with the material, showcasing a variety of views about the good, the bad, and the best way forward.

Six days ago, astronaut Mark Watney became one of the first people to walk on Mars. Now, he's sure he'll be the first person to die there. After a dust storm nearly kills him and forces his crew to evacuate while thinking him dead, Mark finds himself stranded and completely alone with no way to even signal Earth that he's alive--and even if he could get word out, his supplies would be gone long before a rescue could arrive. Chances are, though, he won't have time to starve to death. The damaged machinery, unforgiving environment, or plain old "human error" are much more likely to kill him first. But Mark isn't ready to give up yet. Drawing on his ingenuity, his engineering skills--and a relentless, dogged refusal to quit--he steadfastly confronts one seemingly insurmountable obstacle after the next. Will his resourcefulness be enough to overcome the impossible odds against him?

On 9 March 1916, the forces of Doroteo Arango, better known as Francisco "Pancho" Villa, attacked the small border town of Columbus, New Mexico. In response to the raid, President Woodrow Wilson authorized Brig. Gen. John J. "Black Jack" Pershing to organize an expedition into Chihuahua, Mexico, in order to kill or capture Villa and those responsible for the assault. By 15 March, 4,800 Regular Army soldiers had assembled in Columbus and Camp Furlong, the Army garrison just outside of the town's center. These men fanned out into the Mexican countryside on horseback in small, highly mobile cavalry detachments--sometimes led by local guides or by the Army's Apache scouts--that could cover large swaths of sparsely populated and rough terrain. Cavalrymen employed skills and strategies developed in the preceding decades on frontier campaigns in the West and in warfare against irregular, guerrilla forces in the Philippines. The Mexican Expedition, popularly called the "Punitive Expedition," was to be one of the last operations to employ these methods of warfare and one of the first to rely extensively on trucks. It also provided a testing ground for another new technology--the airplane. During the eleven months that Pershing's expedition was in Chihuahua, U.S. troops failed to kill, capture, or even spot Pancho Villa, but the impact of the expedition reached far beyond the deserts of northern Mexico. The approximately 10,000 regulars that served in the Punitive Expedition gained experience in large, multiunit field operations at a time when small-unit actions were the norm. The Mexican Expedition, 1916-1917, by Julie Irene Prieto, examines the operation, led by General John Pershing, to search for, capture, and destroy Francisco "Pancho" Villa and his revolutionary army in northern Mexico in the year prior to the United States' entry into World War I. This campaign marked one of the final times cavalry was used on a large scale, and it was one of the first to use trucks and airplanes in the field. While Pershing's troops failed to capture Villa, both Regular Army troops and National Guardsmen stationed on the border gained valuable experience in these new technologies.
