Whether you want to create custom or replacement parts or build an entire automobile body, this metalworking course for gearheads from best-selling automotive restoration author and professor Ed Barr will take you as far as your interests reach. Barr demystifies this seemingly black art with information on tools and basic skills and 14 customizable projects, fully illustrated with step-by-step color photography. First, you'll learn how to assemble your ideal toolkit, as well as how to build a power hammer and an English wheel. In the process, Barr will help you make informed choices based on available space and budget. Once you're all

set up, he addresses the concepts of shape and form. The projects are presented in a way that you can easily apply them to their own vehicles, whatever they may be. Barr also takes the time to show how the projects can be accomplished with different available tools. As you go, you'll gain the skills and confidence for tackling the increasingly complex cases presented. Work your way up to building a fender utilizing the wheeling machine you built earlier; then move on to building a Model T speedster body and an Indy car, and later a challenging '65 Plymouth fender. The book even includes common "goofs" and how to avoid and, if necessary, correct them. Written in an engaging and approachable style, *Sheet Metal Shaping* serves equally well as a useful supplement to Barr's previous *Professional Sheet Metal Fabrication* or as a must-have standalone volume for any fabricator's library.

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that

the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

This book is the unique and factual biography of the life and times of automotive legend Glenn Pray. The book is for those who are interested in small scale automobile manufacturing, fans of Auburn, Cord and Duesenberg cars, or for those who would just like to read a fascinating true life yarn. As with Preston Tucker and Malcolm Bricklin, Glenn Pray was able to introduce a technically and visually innovative automobile to the world stage.

Additionally this book describes his acquisition of the Auburn-Cord-Duesenberg Company and his later adventures at manufacturing Auburn replicars. Also recommended is another Josh B. Malks book, 'Cord 810/812 The Timeless Classic'. Many great pictures throughout adds life to the words of this book. "A well-written biography of a man who was obsessed, determined, gutsy, creative and sometimes

desperate, but who never let the words 'no'. 'can't' or, impossible' interfere with his quest. very interesting reading." George Smith Past president, Auburn-Cord-Duesenberg Club The 356 Porsche Voyageur Press (MN)

Satisfy your dream collector-car desires with this one-stop reference for starting or expanding your collection beyond traditional classics and muscle cars. Focusing on the interests and needs of Generation X and Millennial car collectors, The NextGen Guide to Car Collecting offers a concise history of car collecting to present day, guidance on car buying and living the car-collector life, and an overview of collector cars with a focus on cars built from the 1970s through the 1990s while also touching on more contemporary cars. Chapters highlight Japanese, American, and European cars, particularly those models that have experienced the greatest growth in collector interest over the past decade. The NextGen Guide to Car Collecting explores the many ways the Internet and social media have changed the classic car marketplace. You'll learn how to buy a classic car online without suffering buyer's remorse, as well as the four critical keys to a happy collector-vehicle relationship: 1) possessing discretionary cash for the initial purchase; 2) obtaining a thorough knowledge of the car

and its ownership; 3) the critical pre-purchase inspection; and 4) access to a work space. You'll also find out why the popularity of late twentieth-century specialty cars will continue to grow (think increasing electronic complication and the still-large number of enthusiasts for whom "self-driving" means driving themselves) and explore the attributes that makes these cars desirable collector vehicles. In addition, the book looks at the significant increases in quality and reliability of post-1970s machines and how that impacts their collectibility. Finally, learn why expectations that your newfound classic could outlast our current crop of lithium-ion-dependent electric cars may not be unrealistic: recent developments like ride-hailing and sharing services; expanded public transit; rental bikes and scooters; and garage condos and other storage options could actually extend the life of your "new" classic permitting you to truly tailor the use of your classics. Whether your collection requires a one-stall garage or a pole barn, the practical, useful information and keen perspective of The NextGen Guide to Car Collecting will ensure you pull this volume from your shelf time and again.

Building upon the previous editions, this textbook is a first course in stochastic processes taken by undergraduate and graduate students (MS and PhD students from math, statistics, economics, computer science, engineering, and finance departments) who have had a course in probability theory. It covers Markov chains in discrete and continuous time, Poisson processes, renewal processes, martingales, and option pricing. One can only learn a subject by seeing it in action, so there are a large number of examples and more than 300 carefully chosen exercises to deepen the reader's understanding. Drawing from teaching experience and student feedback, there are many new examples and problems with solutions that use TI-83 to eliminate the tedious details of solving linear equations by hand, and the collection of exercises is much improved, with many more biological examples. Originally included in previous

editions, material too advanced for this first course in stochastic processes has been eliminated while treatment of other topics useful for applications has been expanded. In addition, the ordering of topics has been improved; for example, the difficult subject of martingales is delayed until its usefulness can be applied in the treatment of mathematical finance.
