The Lotus Europa was Colin Chapman and Lotus 's first mid-engined road car, and was produced from 1966 through to 1975. Originally designed to slot into the Lotus range below the Elan as a low cost replacement for the Lotus 7, the Europa eventually sat alongside the Elan and Plus 2 as a comparable sports car in its own right. Starting with the design philosophy behind the development of the Europa, this book provides detailed technical descriptions of all the major versions of the model, starting with the Renault-powered Series 1 through to the Lotus Twin Cam powered Special. It looks at the cars on the road, and the racing Type 47 derived from the road cars which competed in the small capacity Group 6 class, as well as featuring in historic racing today. With owners ' impressions and interviews with ex-Lotus employees, the book provides a valuable insight into owning, running, and racing these iconic cars.

First shown as the TT coupe concept at the 1995 Frankfurt Motor Show and then soon afterward as the TT convertible at the Tokyo Motor Show, the cars heralded a new design language from Audi - the Bauhaus style from the 1930s that looked a little brutal at first, but has proven to have a long and successful production life. It finally arrived on the European market for the 1999 model year, with America following a little later. Senior Audi models, the A4, A6, and A8, have their engine and transmission sited longitudinally in the car, but the TT was based on the smaller A3 platform, which meant that the mechanical components were sited transversely. After a slow start, sales picked up and have remained strong ever since. The media loved the Audi TT and continued to write glowing reports about it even though it was six years old in the marketplace, outlasting the Mercedes-Benz SLK, BMW Z3, and Porsche Boxster by quite some time.

The Life of the Automobile is the first comprehensive world history of the car. The automobile has arguably shaped the modern era more profoundly than any other human invention, and author Steven Parissien examines the impact, development, and significance of the automobile over its turbulent and colorful 130-year history. Readers learn the grand and turbulent history of the motor car, from its earliest appearance in the 1880s—as little more than a powered quadricycle—and the innovations of the early pioneer carmakers. The author examines the advances of the interwar era, the Golden Age of the 1950s, and the iconic years of the 1960s to the decades of doubt and uncertainty following the oil crisis of 1973, the global mergers of the 1990s, the bailouts of the early twenty-first century, and the emergence of the electric car. This is not just a story of horsepower and performance but a tale of extraordinary people: of intuitive carmakers such as Karl Benz, Sir Henry Royce, Giovanni Agnelli (Fiat), André Citroën, and Louis Renault; of exceptionally gifted designers such as the eccentric, Ohio-born Chris Bangle (BMW); and of visionary industrialists such as Henry Ford, Ferdinand Porsche (the Volkswagen Beetle), and Gene Bordinat (the Ford Mustang), among numerous other game changers. Above all, this comprehensive history demonstrates how the epic story of the car mirrors the history of the modern era, from the brave hopes and soaring ambitions of the early twentieth century to the cynicism and ecological concerns of a century later. Bringing to life the flamboyant entrepreneurs, shrewd businessmen, and gifted engineers that worked behind the scenes to bring us horsepower and performance, The Life of the Automobile is a globe-spanning account of the auto industry that is sure to rev the engines of entrepreneurs and gearheads alike.

On the theoretical side a review of MR fluid compositions and key factors affecting the characteristics of these fluids is followed by a description of existing applications in the area of vibration isolation and flow-mode shock absorbers in particular. As a majority of existing magnetorheological devices operates in a so-called flow mode a critical review is carried out in that regard. Specifically, the authors highlight common configurations of flow-mode magnetorheological shock absorbers, or so-called MR dampers that have been considered by the automotive industry for controlled chassis applications. The authors focus on single-tube dampers utilizing a piston assembly with one coil or multiple coils and at least one annular flow channel in the piston.
