"A compelling, enjoyable, and widely accessible exploration of one of the most fundamental scientific issues of our age" (Brian Greene, author of *The Elegant Universe*). In *The Hole in the Universe*, an award-winning science writer "provides an illuminating slant on physics and mathematics by exploring the concept of nothing" (*Scientific American*). Welcome to the world of cutting-edge math, physics, and neuroscience, where the search for the ultimate vacuum, the point of nothingness, the ground zero of theory, has rendered the universe deep, rich, and juicy. Every time scientists and mathematicians think they have reached the ultimate void, something new

appears: a black hole, an undulating string, an additional dimension of space or time, repulsive anti-gravity, universes that breed like bunnies. Cole's exploration at the edge of everything is "as playfully entertaining as it is informative" (*San Jose Mercury News*). "A strong and sometimes mind-blowing introduction to the edges of modern physics." —*Salon.com* "Comprising an expansive set of topics from the history of numbers to string theory, the big bang, even Zen, the book's chapters are broken into bite-sized portions that allow the author to revel in the puns and awkwardness that comes with trying to describe a concept that no one has fully grasped. It is an amorphous, flowing, mind-bending discussion, written in rich, graceful prose. As clear and accessible as Hawking's *A Brief History of Time*, this work deserves wide circulation, not just among science buffs." —*Publishers Weekly*, starred review "Here we have the definitive book about nothing, and who would think that nothing could be so interesting . . . not only accessible but compelling reading." —*St. Louis Post-Dispatch*

[Mig Welding Guide](#) St. Martin's Press

MIG (metal inert gas) welding, also known as gas metal arc welding (GMAW), is a key joining technology in manufacturing. MIG welding guide provides a comprehensive, practical and accessible guide to this widely used process. Part one discusses the range of technologies used in MIG welding, including power sources, shielding gases and consumables. Fluxed cored arc welding, pulsed MIG welding and MIG brazing are also explored. Part two reviews quality and safety issues such as improving

productivity in MIG/MAG welding, assessing weld quality, health and safety, and methods for reducing costs. The final part of the book takes a practical look at the applications of MIG welding, with chapters dedicated to the welding of steel and aluminium, the use of robotics in MIG welding, and the application of MIG welding in the automotive industry. MIG welding guide is essential reading for welding and production engineers, designers and all those involved in manufacturing. - Provides extensive coverage on gas metal arc welding, a key process in industrial manufacturing - User friendly in its language and layout - Looks at the practical applications of MIG welding

*The Psychology of the Car* explores automotive cultures through the lens of psychology with the goal of achieving a low-carbon transport future. Worldwide there are now more than one billion cars, and their number grows continuously. Yet there is growing evidence that humanity needs to reach 'peak cars' as increased air pollution, noise, accidents, and climate change support a decline in car usage. While many governments agree, the car remains attractive, and endeavors to change transport systems have faced fierce resistance. Based on insights from a wide range of transport behaviors, *The Psychology of the Car* shows the "why of automotive cultures, providing new perspectives essential for understanding its

attractiveness and for defining a more desirable transport future. The Psychology of the Car illustrates the growth of global car use over time and its effect on urban transport systems and the global environment. It looks at the adoption of the car into lifestyles, the "mobilities turn, and how the car impacts collective and personal identities. The book examines car drivers themselves; their personalities, preferences, and personality disorders relevant to driving. The book looks at the role power, control, dominance, speed, and gender play, as well as the interrelationship between personal freedom and law enforcement. The book explores risk-taking behaviors as accidental death is a central element of car driving. The book addresses how interventions can be successful as well as which interventions are unlikely to work, and concludes with how a more sustainable transport future can be created based on emerging transport trends. - Features deep analyses of individual and collective psychologies of car affection, moving beyond sociology-based interpretations of automobile culture - Illustrates concepts using popular culture examples that expose ideas about automobility - Shows how fewer, smaller and more environmentally friendly cars, as well as low-carbon transport modes, are more socially attractive

Sarah is growing up fast. She swings on swings, slides down slides, and climbs trees. Whenever she falls, her mother sweeps her up in her arms and soothes away the hurt. Her mother is always there for her-on her first day of school, when she falls in love for the first time, and finally when she leaves home and starts a family of her own. It is then that Sarah realizes what a wonderful gift her mother has given her. As she watches over a

daughter of her own, Sarah passes on that gift, helping her child through the trials of growing up with a gentle strength and enduring love. This beautiful testament to the powerful bond between mothers and daughters will move and inspire mothers while reassuring their daughters that they have a special safety net that will never let them down. Anna Strauss was only sixteen-years-old when she was inspired to write this story as a gift for her mother. Now her enchanting story makes a perfect gift to celebrate the special mother/daughter bond on Mother's Day, Graduation Day, and all year round. *Intellectual Property* Cengage Learning

The magic of brands is as old as Coke and as young as Tango. But getting beneath the packaging to understand a brand's winning technique is tough. Why do Kellogg's or Barbie still remain the consumer's friend? Why should a computer name or a sporting logo win favour with consumers worldwide? The World's Greatest Brands asks such key questions of over 350 of the world's leading brands. Explanations of a brand's history, its management and exploitation will appeal to the expert and the consumer. Anecdotes and analysis are combined to explain the science and art that have contributed to great branding case histories. Also included here is branding consultancy Interbrand's ranking of the world's 100 most powerful brands along with their assessment of brand owners' skills and winning techniques. This is a unique compilation on a subject with a fascination for all consumers. No-one who enjoys the benefits of great brands can fail to enjoy and profit from this book.

Metal matrix composites are making tangible inroads into the "real" world of engineering. They are used in engineering components such as brake rotors, aircraft parts, combustion engines, and heat sinks for electronic systems. Yet, outside a relatively limited circle of specialists, these materials are mostly unknown. Designers do not as a rule think of using these materials, in part because access to information is difficult as these materials have not really entered engineering handbooks. Metal Matrix Composites in Industry is thus useful to engineers who wish to gain introductory knowledge of these materials and who want to know where "to find" them.

Additionally, it provides researchers and academics with a survey of current industrial activity in this area of technology.

"But the point of Burke's work, and the significance of his achievement, is not that he points out that religion and language affect each other, for this has been said before, but that he proceeds to demonstrate how this is so by reference to a specific symbolic context. After a discussion 'On Words and The Word,' he analyses verbal action in St. Augustine's Confessions. He then discusses the first three chapters of Genesis, and ends with a brilliant and profound 'Prologue in Heaven,' an imaginary dialogue between the Lord and Satan in which he proposes that we begin our study of human motives with

complex theories of transcendence,' rather than with terminologies developed in the use of simplified laboratory equipment. . .

. Burke now feels, after some forty years of search, that he has created a model of the symbolic act which breaks through the rigidities of the 'sacred-secular' dichotomy, and at the same time shows us how we get from secular and sacred realms of action over the bridge of language. . .

. Religious systems are systems of action based on communication in society. They are great social dramas which are played out on earth before an ultimate audience, God. But where theology confronts the developed cosmological drama in the 'grand style,' that is, as a fully developed cosmological drama for its religious content, the 'logologer' can be further studied not directly as knowledge but as anecdotes that help reveal for us the quandaries of human governance." --Hugh Dalziel Duncan from *Critical Responses to Kenneth Burke, 1924 - 1966*, edited by William H. Rueckert (Minneapolis: University of Minnesota Press, 1969).
