Management decisions on appropriate practices and policies
regarding tropical forests often need to be made in spite of
innumerable uncertainties and complexities. Among the
uncertainties are the lack of formalization of lessons learned
regarding the impacts of previous programs and projects. Beyond
the challenges of generating the proper information on these
impacts, there are other difficulties that relate with how to socialize
the information and knowledge gained so that change is
transformational and enduring. The main complexities lie in
understanding the interactions of social-ecological systems at
different scales and how they varied through time in response to
policy and other processes. This volume is part of a broad research
effort to develop an independent evaluation of certification impacts
with stakeholder input, which focuses on FSC certification of natural
tropical forests. More specifically, the evaluation program aims at

building the evidence base of the empirical biophysical, social,
economic, and policy effects that FSC certification of natural forest
has had in Brazil as well as in other tropical countries. The contents of
this volume highlight the opportunities and constraints that those
responsible for managing natural forests for timber production have
experienced in their efforts to improve their practices in Brazil. As
such, the goal of the studies in this volume is to serve as the
foundation to design an impact evaluation framework of the impacts
of FSC certification of natural forests in a participatory manner with
interested parties, from institutions and organizations, to
communities and individuals.
