Check the battery voltage with the voltmeter. Connect the red voltmeter lead to the positive terminal and the black lead to the negative terminal. The voltage should read 12.5 to 12.75. If the voltage is one or more volts lower, the battery is discharged or has a bad cell. Charge the battery and retest.

Check to see if the engine stalls or misses through the driving speed range. If this is happening to your Ford Expedition, the problem is likely a clogged fuel filter. However, a more serious problem could be uneven compression in the cylinders. This happens primarily as the Expedition ages. Mileage, not years, will measure how old the SUV is.
