The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be

equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising

technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Energy Independence New Amer Library Task Listening aims to develop the listening skills of students who have had little exposure to authentic spoken English. It is suitable for lower-intermediate and also more advanced students whose listening has been developed primarily as a means to a grammatical or structural end. Each of the twenty-six units consists of a short tape recording and related tasks. The recordings are of people speaking at normal speed in everyday situations. Each unit has as its theme a setting or situation in which listening plays a major part, for example, at an airport listening for flight announcements or at a travel agency being told about different means of transport. In each case, having completed the necessary language work, students listen to the tape and extract the information necessary to complete a simple

task, such as labelling a picture or filling in a grid. Related reading and writing tasks are provided as a follow-up to each listening task. Task Listening aims to help students to sift out utterances of relevance and ignore redundant features, a skill vital to efficient listening at all levels of language learning. The Teacher's Book contains extensive notes on how to use the material and completed tasks for each unit. The notes give suggestions to prepare students for listening and include the key language for each recording.
