Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives

a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for

optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.	FLTRX Road Glide Custom (2010-2013)	(2012) FLTRXSE2 CVO Road Glide Custom (2013)

This exciting new  
text teaches the

foundations of electric  
circuits and develops  
a thinking style and a  
problem-solving  
methodology that is  
based on physical  
insight. Designed for  
the first course or  
sequence in circuits in  
electrical engineering,  
the approach imparts  
not only an  
appreciation for the  
elegance of the  
mathematics of circuit  
theory, but a genuine  
"feel" for a circuit's  
physical operation.  
This will benefit  
students not only in  
the rest of the  
curriculum, but in  
being able to cope  
with the rapidly  
changing technology  
they will face on-the-  
job. The text covers  
all the traditional  
topics in a way that  
holds students'  
interest. The  
presentation is only as  
mathematically

---

rigorous as is needed, and theory is always related to real-life situations. Franco introduces ideal transformers and amplifiers early on to stimulate student interest by giving a taste of actual engineering practice. This is followed by extensive coverage of the operational amplifier to provide a practical illustration of abstract but fundamental concepts such as impedance transformation and root location control--always with a vigilant eye on the underlying physical basis. SPICE is referred to throughout the text as a means for checking the results of hand calculations, and in separate end-of-chapter sections, which introduce the most important

SPICE features at the specific points in the presentation at which students will find them most useful. Over 350 worked examples, 400-plus exercises, and 1000 end-of-chapter problems help students develop an engineering approach to problem solving based on conceptual understanding and physical intuition rather than on rote procedures.

This book celebrates the best of Harley-Davidson's magnificent heritage, detailing more than 50 machines, built over nearly a century of manufacturing. All the most famous production models are included, from the Silent Gray Fellow of 1911, right up to today's motorcycles, with their Twin Cam 88 engines. Stunning photography highlights every aspect of each

For Harley-Davidson aficionados, the very name Sportster conjures an image of a fire-breathing mechanical beast scorching the world's tarmacan image the Sportster itself often does not live up to. Straight from the factory, in its standard form, the Sportster

routinely proves an entry-level motorcycle providing a relatively tame ride. This book aims to change all that and to show every Sportster rider how to free the beast in his or her bike. With expert, detailed advice on the proper mechanical massaging and plenty of helpful diagrams and photos this updated, third edition of Buzz Buzzelli's best-selling handbook shows how the Sportster can be

transformed into the superbike of old.

Including a history of the Sportster from its birth in 1957 to the recent introduction of a new engine (only the third in its long life), this book has everything it takes to open up the gates of hell and give the Sportster its head.
