For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

Introducing Microsoft Power BI Alcoholics Anonymous World Services

In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

This IBM® Redbooks® publication provides advice and technical information about optimizing and tuning application code to run on systems that are based on the IBM POWER7® and POWER7+™ processors. This advice is drawn from application optimization efforts across many different types of code that runs under the IBM AIX® and Linux operating systems, focusing on the more pervasive performance opportunities that are identified, and how to capitalize on them. The technical information was developed by a set of domain experts at IBM. The focus of this book is to gather the right technical information, and lay out simple guidance for optimizing code performance on the IBM POWER7 and POWER7+ systems that run the AIX or Linux operating systems. This book contains a large amount of straightforward performance optimization that can be performed with minimal effort and without previous experience or in-depth knowledge. This optimization work can: Improve the performance of the application that is being optimized for the POWER7 system Carry over improvements to systems that are based on related processor chips Improve performance on other platforms The audience of this book is those personnel who are responsible for performing migration and implementation activities on IBM POWER7-based servers, which includes system administrators, system architects, network administrators, information architects, and database administrators (DBAs).

Water and light have seduced artists through the years and the quality of these elements at the New Jersey Shore continues to attract artists to this day. Between the late 1800s and 1940, an inspired group of painters were drawn to the New Jersey coastline, forming communities of artists. Jersey Shore Impressionists breaks new ground in the history of American art by recognizing the distinct influence of New Jersey and its Shore on impressionist era American painters. This book establishes – for the first time – a category of

impressionist American painters who focused on, or were profoundly influenced by, the landscapes and seascapes of this Shore — from Sandy Hook and Highlands to the Barnegat Bay region to Cape May. “Not since 1964, nearly 50 years ago, and only once before that in 1938 has there been published a book on painters in New Jersey,” says the book's author, Roy Pedersen. “Never until now has there appeared a survey of the regional impressionist painters of New Jersey. This book and the accompanying exhibition for the first time celebrate these unrecognized works into the history of New Jersey and American art.” Jersey Shore Impressionists is produced in conjunction with a 2013 exhibition at the Morven Museum & Garden in Princeton, NJ. The exhibition, titled “Coastal Impressions: Painters of the Jersey Shore, 1880-1940” seeks to examine how the New Jersey shore was home to artist colonies whose output rivaled that of the better-known colonies of Old Lyme and Cos Cob, Connecticut, and Bucks County, Pennsylvania. In a Foreword, Richard J. Boyle, former director of the Pennsylvania Academy of the Fine Arts, describes the foundation of art colonies, and how they traveled from origins in mid-nineteenth century France to the plein-air attraction of the Jersey Shore's “special light.” The first art colony – at Manasquan – forms around 1880 as young artists fresh from European training in Germany, France and Italy begin to arrive, and the book includes work from these artists – Will Hicok Low, Theodore Robinson, Albert Grantley Reinhart, Charles Freeman and Caroline Coventry Haynes. The next generation – Edward Boulton, Ida Wells Stroud, Julius Golz – trained in America, join and form new colonies to paint the unique light as well as the activities of the Shore. The passionate work created by these artists stands as an important, but unsung, chapter of American Impressionism and is celebrated in this book, establishing the important contribution to American art in general, and New Jersey's cultural heritage in particular.

This book focuses on the vulnerabilities of state and local services to cyber-threats and suggests possible protective action that might be taken against such threats. Cyber-threats to U.S. critical infrastructure are of growing concern to policymakers, managers and consumers. Information and communications technology (ICT) is ubiquitous and many ICT devices and other components are interdependent; therefore, disruption of one component may have a negative, cascading effect on others. Cyber-attacks might include denial of service, theft or manipulation of data. Damage to critical infrastructure through a cyber-based attack could have a significant impact on the national security, the economy, and the livelihood and safety of many individual citizens. Traditionally cyber security has generally been viewed as being focused on higher level threats such as those against the internet or the Federal government. Little attention has been paid to cyber-security at the state and local level. However, these governmental units play a critical role in providing services to local residents and consequently are highly vulnerable to cyber-threats. The failure of these services, such as waste water collection and water supply, transportation, public safety, utility services, and communication services, would pose a great threat to the public. Featuring contributions from leading experts in the field, this volume is intended for state

and local government officials and managers, state and Federal officials, academics, and public policy specialists.

Over the last few years, IBM® IMSTM and IMS tools have been modernizing the interfaces to IMS and the IMS tools to bring them more in line with the current interface designs. As the mainframe software products are becoming more integrated with the Windows and mobile environments, a common approach to interfaces is becoming more relevant. The traditional 3270 interface with ISPF as the main interface is no longer the only way to do some of these processes. There is also a need to provide more of a common looking interface so the tools do not have a product-specific interface. This allows more cross product integration. Eclipse and web-based interfaces being used in a development environment, tooling using those environments provides productivity improvements in that the interfaces are common and familiar. IMS and IMS tools developers are making use of those environments to provide tooling that will perform some of the standard DBA functions. This book will take some selected processes and show how this new tooling can be used. This will provide some productivity improvements and also provide a more familiar environment for new generations DBAs. Some of

the functions normally done by DBA or console operators can now be done in this eclipse-based environment by the application developers. This means that the need to request these services from others can be eliminated. This IBM Redbooks® publication examines specific IMS DBA processes and highlights the new IMS and IMS tools features, which show an alternative way to accomplish those processes. Each chapter highlights a different area of the DBA processes like: PSB creation Starting/stopping a database in an IMS system Recovering a database Cloning a set of databases

Members of the naval service will find that at all points in their careers they can expect to be involved to some extent in the planning and execution of official ceremonies and social events. Protocol is a code of established guidelines on proper etiquette and precedence which, when followed, lays the foundation for a successful event. From this foundation, the host should consider

the facets which make a particular situation unique, and from there, use imagination to design a memorable occasion. The most important consideration in planning should always be the comfort of one's guests. A clever host/hostess is able to reach a proper mixture of protocol and common sense that will enable guests to enjoy themselves completely. If this is accomplished, an event is truly successful.

In 2005, *The Woman at the Washington Zoo* was published

to major critical acclaim. The late Marjorie Williams possessed "a special voice, one capable not just of canny political observations but of tenderness and bracing intimacy," observed the New York Times Book Review. Now, in a collection of profiles with the richness of short fiction, Williams limns the personalities that dominated politics and the media during the final years of the twentieth century. In these pages, Clark Clifford grieves "in his laborious baritone" a bank scandal's blow to his re-putaaaaay-shun. Lee Atwater likens himself to Ulysses and pleads, "tah me to the mast!" Patricia Duff sheds "precipitous tears" over her divorce from Ronald Perelman, resembling afterwards "a garden refreshed by spring rain." Reputation illuminates our recent past through expertly drawn portraits of powerful - and messily human - figures. *Autocar & Motor* IBM Redbooks

This IBM® Redbooks® publication examines the IBM Tivoli® Directory Server for z/OS®. IBM Tivoli Directory Server is a powerful Lightweight Directory Access Protocol (LDAP) infrastructure that provides a foundation for deploying comprehensive identity management applications and advanced software architectures. This publication provides an introduction to the IBM Tivoli Directory Server for z/OS that provides a brief summary of its features and a examination of the possible deployment topologies. It discusses planning a deployment of IBM Tivoli Directory Server for z/OS, which includes prerequisites, planning considerations, and data stores, and provides a brief overview of the configuration process. Additional chapters provide a detailed discussion of the IBM Tivoli

Directory Server for z/OS architecture that examines the supported back ends, discusses in what scenarios they are best used, and provides usage examples for each back end. The discussion of schemas breaks down the schema and provides guidance on extending it. A broad discussion of authentication, authorization, and security examines the various access protections, bind mechanisms, and transport security available with IBM Tivoli Directory Server for z/OS. This chapter also provides an examination of the new Password Policy feature. Basic and advanced replication topologies are also covered. A discussion on plug-ins provides details on the various types of plug-ins, the plug-in architecture, and creating a plug-in, and provides an example plug-in. Integration of IBM Tivoli Directory Server for z/OS into the IBM Workload Manager environment is also covered. This publication also provides detailed information about the configuration of IBM Tivoli Directory Server for z/OS. It discusses deploying IBM Tivoli Directory Server for z/OS on a single system, with examples of configuring the available back ends. Configuration examples are also provided for deploying the server in a Sysplex, and for both basic and advanced replication topologies. Finally it provides guidance on monitoring and debugging IBM Tivoli Directory Server for z/OS.
