Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science

Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. Problem Solving 4 Today, Grade 1 Carson-Dellosa Publishing

Word Problems Grade 1 : Three Addend Addition Word Problems 1st Grade : Includes Bonus / Enrichment Questions for Kindergarten, 1st, 2nd Grade This pack includes 31 addition and subtraction word problems grade 1 designed for students to "Read-Along, Sketch and Solve." The format is ideal for special education, intervention groups or guided math groups. Each problem is presented in a full-page format to give students enough space to investigate multiple ways to solve the problem. The word "sketch" is intentionally used on all pages. Before students begin work, we often discuss how to represent objects using quick sketches as opposed to time-consuming detailed pictures. These word problems for grade 1 are designed with the rigor of the Common Core in mind and support the following standards:

CCSS.Math.Content.K.OA.A.2 Solve addition and subtraction grade 1 math word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem.

CCSS.Math.Content.1.OA.A.1 Use addition and subtraction within 20 to solve word problem grade 1 involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for

the unknown number to represent the problem. (These are beginning of the year first grade problems - working within groups of ten.***) Each sheet includes: A place for students to sketch the problem. A ten frame for students to utilize. I encourage students to cross out items that are taken away as they work with the ten frame for subtraction. A number path on which students show their work. A space for an equation. A space to fill the answer in. Click on the preview to read why a number path is used instead of a number line. As I introduce the first few problems with a group, we work through each section together and students complete each box on the sheet. Once students are familiar with the ways these sheets support their problem solving, I often have each student choose at least 2 ways to show and check their work. This allows each student to utilize the methods that are most efficient for him/her. I love to give students time to discuss why they chose certain methods to solve a problem! Each sheet includes an extension/bonus question at the bottom. These questions can be used in a variety of ways. Many parents want to help their child develop math concepts, but are not sure how. These bonus questions are perfect extension activities for students to discuss and complete at home with a family member. I love to see the extension work that students return! Many parents have commented that they appreciate the challenging nature of these questions. When these word problems 1st grade are used for whole-group instruction, it is common for some students to have completed tasks while others still need support. "Early finishers" can read-along with you as you introduce the bonus question, flip their paper over and work on this challenge question while you provide individual and/or small group instruction as needed. In this way, these bonus questions help teachers differentiate during group lessons. Many thanks for stopping by and taking a look! Sincerely, Enjoy :) All Educate School
