The book guides specialists and non-specialists from around the world on how or whether anaerobic processes can be part of solutions for the management of municipal and industrial solid, semi-solid, and liquid residues. The simple self-learning presentation style is designed to encourage deep understanding of the process principles, plant types and system configurations, performance capabilities, operational and maintenance requirements, post-treatment needs, and management options for coproducts without complex biochemical terminologies and equations. It describes key aerobic biological treatment processes used in conjunction with anaerobic biological treatment in feedstock pre-treatment and in post-treatment of by-products. Practical pre-treatment processes, techniques and operations are described alongside additional treatment techniques of biogas, digestates and treated effluents for various end use options. Effective applications in developing countries are also considered, enabling practitioners and plant operators to effectively apply technology in temperate and warm climatic conditions.

The book introduces new ways of using analytic number theory in cryptography and related areas, such as complexity theory and pseudorandom number generation. Cryptographers and number theorists will find this book useful. The former can learn about new number theoretic techniques which have proved to be invaluable cryptographic tools, the latter about new challenging areas of applications of their skills.

Chemistry touches every aspects of our life, but we are largely ignorant of it. A general reader has access to many popular books in the various areas of physics and astornomy, but in the area of chemistry there is virtually no accessible material. One common perception is that chemistry is a difficult subject, which is partially true.

Recommended age: 6-10 years You are a fan of Minecraft and you like coloring? Then, this is the perfect book for you! There are 30 pictures of your favorite Minecraft creatures in cute mini format, like Baby Zombie, Baby Creeper, Baby Bunny and many other to color. Practise your multiplication, substraction, division and addition skills. Solve the exercises and use the key below the picture to find the correct colors for the different squares. The pictures provide exercises in basic (1st & 2nd Grade) and advanced levels (3rd & 4th Grade). The only things you need to start the fun are this book and colored pencils. A must have for all young fans of Minecraft.

The current trend of learner centeredness in education has been challenging many of the current ways of working, especially in higher education institutions. This rapid change in educational institutions demands educators acquire new sets of skills via continuous reflective practices. Hence, educators in higher education institutions are actively involved in research-driven teaching and learning practices. This change of role from mere content delivery to learning facilitators could be better achieved through a strong research-driven community of practice. Preparing 21st Century Teachers for Teach Less, Learn More (TLLM) Pedagogies is a pivotal reference source that provides vital research on the application of practice-based learning techniques in higher education institutions. This publication establishes a platform for academics to share their best practices to promote teach less, learn more pedagogies and learn reciprocally from the community of practice. While highlighting topics such as interactive learning, experiential technology, and logical thinking skills, this book is ideally designed for teachers, instructional designers, higher education faculty, deans, researchers, professionals, universities, academicians, and students seeking current research on transformative learning and future teaching practices.

Are you constantly tired, depressed, and have very little interest in the bedroom? You may be suffering from a condition called

low testosterone which affects millions of men. Don't worry, help is on the way. Welcome to Testosterone Health: For Life. Learn about natural supplements, food, and exercises that can enhance your sexual health. Fitness and sexual health go hand in hand. If you let your fitness levels decline, so does your ability to perform in the bedroom. In addition, this book features: • Fitness for Health and Libido • Testosterone and Age • Where is Testosterone Created • Lifestyle and Exercise • Eating for Libido Health • Top Eight Fat Loss Tips • Understanding Energy Balance • Eating For Fat Loss • The Importance of Nitric Oxide • Supplements • Erectile Dysfunction Drugs • Testosterone Therapy • The Eight Week Program • The Program Structure • The Workouts The workouts provided in this booklet are geared towards functional fitness. Sexual fitness and functional fitness are interrelated. Functional fitness is about everyday movements. Movements like bending, swinging, pushing, and pulling. Sexual fitness is a series of movements and exercises that will help you enjoy nature's best workout, sex. The exercises in this book will help strengthen all your muscles and help to burn off those extra calories creating a lean, healthy physique.

Mathematics is the language of physics, and over time physicists have developed their own dialect. The main purpose of this book is to bridge this language barrier, and introduce the readers to the beauty of mathematical physics. It shows how to combine the strengths of both approaches: physicists often arrive at interesting conjectures based on good intuition, which can serve as the starting point of interesting mathematics. Conversely, mathematicians can more easily see commonalities between very different fields (such as quantum mechanics and electromagnetism), and employ more advanced tools. Rather than focusing on a particular topic, the book showcases conceptual and mathematical commonalities across different physical theories. It translates physical problems to concrete mathematical questions, shows how to answer them and explains how to interpret the answers physically. For example, if two Hamiltonians are close, why are their dynamics similar? The book alternates between mathematics- and physics-centric chapters, and includes plenty of concrete examples from physics as well as 76 exercises with solutions. It exploits that readers from either end are familiar with some of the material already. The mathematics-centric chapters provide the necessary background to make physical concepts mathematically precise and establish basic facts. And each physics-centric chapter introduces physical theories in a way that is more friendly to mathematicians. As the book progresses, advanced material is sprinkled in to showcase how mathematics and physics augment one another. Some of these examples are based on recent publications and include material which has not been covered in other textbooks. This is to keep it interesting for the readers.

Some of puzzling Metaphilosophical Questions on Creation: 1) Who was there before creation? 2) Is there a beginning and an end to this creation? 3) Do other universes exist, similar to the universe we live in? 4) What was the first principle or tatwa that put the creation process into action? 5) Is there any controlling force to rule the universe and to keep the universe harmonious? Some of the Cardinal cosmic laws are: “ What is evolved is necessarily caused. ” -- Cardinal cosmic law - “ Being originated it is destructible/ changed. ” -- Cardinal cosmic law - “ What is caused is limited. ” -- Cardinal cosmic law Evolution takes place every moment*. “ A moment is that period of time unit by which an Anu (atom) in motion gives up its previous position and reaches the succeeding place. ” — Maharshi Vyasa. (3000BC) *A moment (Kshana) indicates the smallest unit of time. “ Dharma is the form of Dharmi ” . “ There is no Dharma without a Dharmi ” “ Dharma Parinama =Characteristic Manifestation is known as Creation ” This subject of creation is generally considered obscure, abstract, secretive and unfathomable. But knowledge is self-luminating and the Veda is knowledge. The ancient wisdom of Bharathadesam is the source of illumination for the concepts of creation.
