The importance of research and education in design continues to grow. For example, government agencies are gradually increasing funding of design research, and increasing numbers of engineering schools are revising their curricula to emphasize design. This is because of an increasing realization that design is part of the wealth creation of a nation and needs to be better understood and taught. The continuing globalization of industry and trade has required nations to re-examine where their core contributions lie if not in production efficiency. Design is a precursor to manufacturing for physical objects and is the precursor to implementation for virtual objects. At the same time, the need for sustainable development is requiring design of new products and processes, and feeding a movement towards design - novations and inventions. There are now three sources for design research: design computing, design cognition and human-centered information

technology. The four- tions for much of design computing remains artificial intelligence with its focus on ways of representation and on processes that support simulation and generation. Artificial intelligence continues to provide an environm- tally rich paradigm within which design research based on computational constructions can be carried out. Design cognition is founded on concepts from cognitive science, an even newer area than artificial intelligence. It provides tools and methods to study human designers in both laboratory and practice settings.

The creation and expression of identity (or of multiple identities) in immersive computer-mediated environments (CMEs) is rapidly transforming consumer behavior. The various social networking and gaming sites have millions of registered users worldwide, and major corporations are beginning to attempt to reach and entice the growing flood of consumers occupying these virtual worlds. Despite this huge potential, however, experts know very little about the best way to talk to consumers in these online environments. How will well-established research findings from the offline world transfer to CMEs? That's where "Virtual Social Identity and Consumer Behavior" comes in. Written by two of the leading experts in the field, it presents cutting-edge academic research on virtual social identity, explores consumer behavior in virtual worlds, and offers important implications for marketers interested in working in these environments. The book provides special insight into the largest and fastest growing group of users - kids and teens. There is no better source for understanding the impact of virtual social identities on consumers, consumer behavior, and electronic commerce.
