Air conditioning in vintage cars often falls into disrepair, as owners figure that it never really worked all that well when it was new, and assume that rejuvenation would be prohibitively expensive. In his new book, *Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning*, Rob Siegel details exactly what's needed to resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin.

The legendary history of the pony car wars comes to life in this softcover edition of *The Cars of Trans-Am Racing*. The SCCA Trans-Am Racing Series launched in 1966 and was designed to showcase a new class of sporty domestic cars racing on road courses. Each major automotive manufacturer participated heavily in the Trans-Am Series, and in a few short years, it became the ultimate American automobile showdown. When the modified muscle cars of the series were seen performing well on the country's finest tracks, fans wanted a model of their own in the driveway. These "pony cars" boasted a new look and style not seen before, and their all-around performance eclipsed anything accomplished by production-based American GT cars up to that point. This softcover edition of *The Cars of Trans-Am Racing* is unique in that it focuses on the cars used in this legendary series. These vintage Mustangs, Camaros, Challengers, Barracudas, Firebirds, Cougars, and Javelins all are extremely popular with collectors and enthusiasts today. Seeing them in their "full-competition" versions when they were new will bring back many fond memories for those who were fans of this series. In addition, enthusiasts who enjoy these cars today look to the Trans-Am Series cars for styling inspiration and performance hints as part of the growing Pro Touring trend. Many of these historic cars have been restored to race-ready condition. Additional insight and interviews from the original builders and the teams that maintained the cars provide an insider's viewpoint never before seen in print.

Metal matrix composites are making tangible inroads into the "real" world of engineering. They are used in engineering components such as brake rotors, aircraft parts, combustion engines, and heat sinks for electronic systems. Yet, outside a relatively limited circle of specialists, these materials are mostly unknown. Designers do not as a rule think of using these materials, in part because access to information is difficult as these materials have not really entered engineering handbooks. *Metal Matrix Composites in Industry* is thus useful to engineers who wish to gain introductory knowledge of these materials and who want to know where "to find" them. Additionally, it provides researchers and academics with a survey of current industrial activity in this area of technology.
