There is no bigger issue for healthy infants than sleeping through the night. In this simple, straightforward book, Suzy Giordano presents her amazingly effective "Limited- Crying Solution" that will get any baby to sleep for twelve hours at night—and three hours in the day—by the age of twelve weeks old. Giordano is the mother of five children and one of the most sought-after baby sleep specialists in the country. The Washington Post calls her a baby sleep "guru" and "an underground legend in the Washington area for her ability to teach newborns how to achieve that parenting nirvana: sleeping through the night." Her sleep plan has been tested with singletons, twins, triplets, babies with special needs, and colicky babies—and it has never failed. Whether you are pregnant, first-time parents or parents who seek a different path with your second or third child, anyone can benefit from the Baby Coach's popular system of regular feeding times, twelve hours of sleep at night and three hours of sleep during the day, and the peace of mind that comes with taking the parent and child out of a sleep-deprived world.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
