Annotation In the next few decades copper will help to consolidate advances in telecommunications and Internet technology. The outlook for copper is bright, and despite the onset of recession in 2000, demand should pick up from 2002-2003 and return to reasonable industrial growth

rates in the developed world. electrical and

World copper prices are predicted to rise due to the dearth of new mining projects in the economic climate of 2001 and steadily rising metal demand led by China. In order to meet increased demand over the next 10 years there will have to be new mining capacity, including recycling of scrap copper and restarting idled capacity. China showed 13.6% growth in demand up to June 2001 and could overtake the US as the world's number one copper consumer in the next 20 years. Up-to-date, in-depth research and analysis to make you an authority on the world's major copper markets this report gives a clear, objective analysis of the world copper industry as it prepares to take advantage of soaring demand in the electronic,

telecommunications industries. Some key findings of this report: How the output of the world's leading copper mines, Escondida, Chuquicamata and el Teniente is set to change over the next few years and what this means for Chilean and world copper production. Beyond 2003 copper demand will flatten in the mature, developed Western countries: this will leave the market delicately poised, and producers will largely be determining their own destinies when deciding when to commit to new projects. In the second half of this decade copper demand should pick up strongly, feeding fears of a shortfall in supply. Peru's copper output is set to be boosted by 50% through the Antamina mining project, owned by the Canadian

consortium of Rio Algom, Noranda, Teck Corp and Mitsui. Telecommunications is a large and growing market for copper: the sector has seen factory sales growing at 8.3% compound rate over the past 8 years, led by strong growth in construction along with the increasing popularity of the Internet. Demand from the automotive sector will also boost consumption of copper in electrical and electronic applications. In 2001 the average copper content of a passenger car was 60lb, compared with under 55lb in 1995.

Since the 1950s, Dodge has produced a series of charismatic performance cars that have given the company a unique reputation among American car makers. The original Charger and Challenger and the more recent Viper and Caliber SRT are outstanding examples of the company's commitment to cars of high performance and aggressive styling. Peter Grist's pictorial history of these typically American machines gives a fascinating insight into their ancestry and evolution and celebrates the huge impact they have made on the road and on the track. His account is an exciting introduction that will appeal to everyone who is interested in American automobile history. When the first Dodge performance cars were conceived in the early 1950s, they were a

brave step for a company that was well known for its dependable saloons and pickups. Peter Grist describes this change of direction and the radical new thinking that resulted in the creation of the innovative Dodge Hemi V8 of 1953. This remarkable engine provided the power for the first sporting Dodges and led to the race-bred D-500 series of 1956, the first Dodge Muscle car. But Dodge's reputation for creating big, potent, sporting cars was really consolidated in the 1960s and early 1970s the muscle-car era when the Dart, Charger and Challenger were so successful on the road, the race track and drag strip. The book features these historic cars and the drivers who have raised Dodge to a pre-eminent position over the last 50 years. Featuring illustrations of Dodge's styling experiments and concept cars, which had such a strong effect on their production models, from the first Dodge concept the 1954 Firearrow up to the most recent Challenger and Hornet. The book brings together an evocative collection of over 200 photographs and adverts that offer a unique look at ALL of Dodge's

fast cars in one book. this is an entertaining and informative guide to the Dodge tradition which will be essential reading for Dodge enthusiasts and for everyone who enjoys their cars at full speed.
