This is the first book to introduce UUDN for  
5G, including the concept, challenges,  
architecture and key technologies. The new  
network architecture based on “ de-  
cellular ” and “ user-centric ” is proposed  
with three kinds of decoupling: user plane  
and control plane decoupling from radio  
access, control and transmission decoupling  
from network, local service and network  
service decoupling. Key characteristics of

UUDN are provided, including four aspects:

Intelligent network knows user, Moving  
network follows user, Dynamic network  
serves user, and Secured network protects  
user. Four promising technology directions  
are discussed in detail, including dynamic  
APs grouping (DAPGing) method, intelligent  
networking, advanced interference  
management and user-centric security. The  
authors also include a UUDN solution,  
illustrated with numerology and evaluation  
results as a practical example. Finally, further  
research directions of UUDN are analyzed.  
This book gives an overall introduction of  
UUDN for people who are interested and just  
begin their study, as well as some suggestions  
on further research for experts involved in  
academic, industrial and standardization  
activities on relative fields.
