Marketing Manipulation deals with the tactics and strategies used by marketers that prey on human cognitive, social and memory based biases ultimately influencing consumer behavior in their favor. Kamins focuses on examples from academic research where consumers have been found to be susceptible to

bias and therefore have made less than optimal purchase decisions. Particularly, academic research in the area of Pricing, Product, Promotion, Sales and marketing research. Written in an accessible manner, this book puts the consumer (you!) in the center and aims to help making all of us a better decision maker when confronted with a range of stimuli in a marketing environment.

When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance.

This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and

drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

An award-winning scientist offers his unorthodox approach to childrearing:
“ Parentology is brilliant, jaw-droppingly funny, and full of
wisdom...bound to change your thinking about parenting and its
conventions ” (Amy Chua, author of Battle Hymn of the Tiger Mother). If
you ’ re like many parents, you might ask family and friends for advice
when faced with important choices about how to raise your kids. You
might turn to parenting books or simply rely on timeworn religious or
cultural traditions. But when Dalton Conley, a dual-doctorate scientist and
full-blown nerd, needed childrearing advice, he turned to scientific research
to make the big decisions. In Parentology, Conley hilariously reports the
results of those experiments, from bribing his kids to do math (since studies
show conditional cash transfers improved educational and health outcomes
for kids) to teaching them impulse control by giving them weird names
(because evidence shows kids with unique names learn not to react when
their peers tease them) to getting a vasectomy (because fewer kids in a
family mean smarter kids). Conley encourages parents to draw on the latest
data to rear children, if only because that level of engagement with kids will

produce solid and happy ones. Ultimately these experiments are very loving,
and the outcomes are redemptive—even when Conley ’ s sassy kids show
him the limits of his profession. Parentology teaches you everything you
need to know about the latest literature on parenting—with lessons that go
down easy. You ’ ll be laughing and learning at the same time.
