The case describes a crisis management situation faced by Mercedes-Benz, a division of Daimler-Benz AG. In 1997 Mercedes had introduced a revolutionary new car, the A-class, Mercedes's first entry into the compact car segment. The A-class was positioned as an entry-level vehicle in the Mercedes line and represented Mercedes's attempt to grow beyond its core market. A few days after the car was officially introduced, it rolled-over during a test known as the "moose test," conducted by a Swedish journalist. The A-class's failed moose-test created extensive media coverage in Germany and other European countries, threatening the success of the A-class launch.

Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of ' mass production ' pioneered by Henry Ford and more recently by ' lean production techniques ' as practised by the leading Japanese producers, particularly Toyota. It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European - dustry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector. Automotive growth is driven by two factors, new m- kets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with c- tinued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic fabric of the

European Union. Manufacturing output represents €700 billion and research and development spending €24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate €500 billion in revenues. These are significant figures that generate wealth and high value employment within the EU. European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.

Designed by Mercedes's head of design Bruno Sacco, the W124 range immediately became the benchmark by which medium-sized car models were judged in the late 1980s due to its engineering excellence and high build quality. There was a model to suit every would-be-buyer, from the taxi driver through the family motorist and on to those who were willing and able to pay for luxury and performance. This book covers: design, development and manufacture of all models of W124 including estates, cabriolets and the stylish coupe range; engines and performance; special editions and AMG models and, finally, buying and owning a W124 today. Superbly illustrated with 264 colour photographs.
