ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air

Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S. inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified as restricted, the manual was recently declassified and is here reprinted in book form.

The development experience of India has been a matter of much interest in recent years. India is home to a sixth of the world's population, and about a third of the country is acknowledged to be living below the officially determined poverty line. After more than six decades of planned economic development the levels of

---

achievement in education and health are poor. After three and a half decades of moderate growth following India's Independence in 1947, a period characterised by centralized planning, the pace picked up in the 1980s with some opening up of the economy. It gathered further momentum after the introduction of market oriented liberalization and significant economic reforms in 1991, and in the past decade the overall growth rate of the economy has been extremely impressive. It is

however important to emphasize that it is not just high growth per se but growth along with equity or distributive justice that needs to be seriously addressed. This collection presents some of the historical material on development issues in the Indian context going back about a hundred years, from Gandhi's economic formulations to Nehru's ideas, substantially different on issues such as the agriculture versus industry debate and the relative roles of the public and private

sectors. After India gained independence in 1947 the issue of economic development assumed centre stage in national policy making. Indeed one might even say that India was the laboratory where many of the significant new hypotheses or theories on economic development have been tested.
