Healthcare Solutions
Using Machine Learning
and Informatics covers
novel and innovative
solutions for healthcare
that apply machine
learning and biomedical
informatics technology.
The healthcare sector is
one of the most critical in
society. This book
presents a series of
artificial intelligence,
machine learning, and

intelligent IoT-based
solutions for medical
image analysis, medical
big-data processing, and
disease predictions.
Machine learning and
artificial intelligence use
cases in healthcare
presented in the book give
researchers, practitioners,
and students a wide range
of practical examples of
cross-domain
convergence. The wide
variety of topics covered
include: Artificial

Language
standardization is an
ongoing process based
on the notions of
linguistic correctness
and models. This
manual contains thirty-
six chapters that deal
with the theories of
linguistic norms and
give a comprehensive

up-to-date description and analysis of the standardization processes in the Romance languages. The first section presents the essential approaches to the concept of linguistic norm ranging from antiquity to the present, and includes individual chapters on the notion of linguistic norms and correctness in classical grammar and rhetoric, in the Prague School, in the linguistic theory of

Eugenio Coseriu, in sociolinguistics as well as in pragmatics, cognitive and discourse linguistics. The second section focuses on the application of these notions with respect to the Romance languages. It examines in detail the normative grammar and the normative dictionary as the reference tools for language codification and modernization of those languages that have a long and well-

established written tradition, i.e. Romanian, Italian, French, Catalan, Spanish, and Portuguese. Furthermore, the volume offers a discussion of the key issues regarding the standardization of the ‘ minor ’ Romance languages as well as Creoles.
