This book presents the papers
from the Internal
Combustion Engines:
Performance, fuel economy
and emissions held in
London, UK. This popular
international conference
from the Institution of
Mechanical Engineers
provides a forum for IC
engine experts looking
closely at developments for
personal transport
applications, though many of
the drivers of change apply to
light and heavy duty, on and
off highway, transport and

other sectors. These are
exciting times to be working
in the IC engine field. With
the move towards
downsizing, advances in FIE
and alternative fuels, new
engine architectures and the
introduction of Euro 6 in
2014, there are plenty of
challenges. The aim remains
to reduce both CO2
emissions and the
dependence on oil-derivate
fossil fuels whilst meeting the
future, more stringent
constraints on gaseous and
particulate material emissions
as set by EU, North American
and Japanese regulations.
How will technology
developments enhance
performance and shape the
next generation of designs?
The book introduces
compression and internal
combustion engines ' applications, followed by
chapters on the challenges

faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons.
