In early 1990, a study was undertaken to examine and compare the usefulness of natural gas, propane, methanol and ethanol in relation to gasoline and diesel fuel for potential use in the transportation industry. The study evaluated the potential environmental and economic benefits of each of the fuels examined, including the characteristics of each alternative fuel, the current and proposed regulations and emission requirements for the vehicle fleet, the use of alternate fuels internationally, and conversion scenarios for each fuel.

It dares to share many of our stories, sometimes revealing some of our dreams and telling of our challenges, our travels, our homes, some of our successes, as well as some of our failings. Stories that disclose who we are, who we were, who we have become, and at times, who we think we are. Stories about some of what we believe and sometimes why we believe what we believe. We hope that our stories build a bridge from where we were to where we are, and they are inviting enough to encourage you to walk into our space and time and help you discover why you are of so much value to the world we all live and make a difference in. Some of our stories help us realize that we--especially we who are born in the United States, even in some of the direst circumstances--are born with the potential of becoming incredibly wealthy, through the gift of love, even as our bank accounts struggle to maintain a mediocre balance. It is our hope that many of our stories will pass the peace of God unto you and among you all.
