The coastal and archipelago
areas in the Baltic Sea are

popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very

common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish

Outdoor Council. The research was performed by SIFO Research International. The Engine that Could Nordic Council of Ministers This cutting-edge manual incorporates the latest in diesel engine technology, giving readers a solid introduction to the technology, operation, and overhaul of heavy duty diesel engines and their respective fuel and electronics systems. Provides critical analyses on the operation, maintenance, service and repair of all types of fuel systems, clearly describing both mechanical and electronic fuel systems and governors. Presents a thoroughly

updated chapter on electronic fuel injection, with detailed discussions on current operation, diagnostics, and troubleshooting of all major systems, such as Caterpillar, Cummins, Detroit Diesel, Mack, and Volvo. Analyzes electronic fuel injection and governors to meet diagnostics/ troubleshooting requirements, and integrates the latest technological information throughout. For automotive service technicians and engineers and diesel engine specialists. Also ideal for use in apprentice training programs and for journeyman upgrading courses.

A "meticulously researched" (The New York Times Book Review) examination

of energy transitions over time and an exploration of the current challenges presented by global warming, a surging world population, and renewable energy—from Pulitzer Prize- and National Book Award-winning author Richard Rhodes. People have lived and died, businesses have prospered and

failed, and nations have risen to world power and declined, all over energy challenges. Through an unforgettable cast of characters, Pulitzer Prize-winning author Richard Rhodes explains how wood gave way to coal and coal made room for oil, as we now turn to natural gas, nuclear power, and renewable energy.

"Entertaining and informative...a powerful look at the importance of science" (NPR.org), Rhodes looks back on five centuries of progress, through such influential figures as Queen Elizabeth I, King James I, Benjamin Franklin, Herman Melville, John D. Rockefeller, and Henry Ford. In his "magisterial

history...a tour de force of popular science" (Kirkus Reviews, starred review), Rhodes shows how breakthroughs in energy production occurred; from animal and waterpower to the steam engine, from internal-combustion to the electric motor. He looks at the current energy landscape, with a focus on how wind

energy is competing for dominance with cast supplies of coal and natural gas. He also addresses the specter of global warming, and a population hurtling towards ten billion by 2100. Human beings have confronted the problem of how to draw energy from raw material since the beginning of time. Each

invention, each discovery, each adaptation brought further challenges, and through such transformations, we arrived at where we are today. "A beautifully written, often inspiring saga of ingenuity and progress...Energy brings facts, context, and clarity to a key, often contentious subject" (Booklist,

starred review).
