Solutions to Competitive Problems in the Oil Industry Oxford University Press, USA
Since the doi moi reforms in 1986, Vietnam has experienced a dramatic socioeconomic transformation. Lim examines the role of the state and its interaction with market forces in bringing this change about. Taking the motorcycle and banking industries as case studies, this book explores the dynamics between the state and transnational corporations in shaping the manufacturing and service sectors, respectively. Vietnam, as one of Southeast Asia's quintessential latecomer economies with little prior experience of dealing with transnational corporations, has nevertheless been quite successful in maintaining some control over the impact of foreign direct investment. Yet, the learning outcomes remain highly uneven. In addition, Lim argues that Vietnamese advancement in both industries mirrors only partially the more generalized patterns of state-led development in East Asia's earlier batch of latecomer economies. Vietnam's case thus presents practical lessons on how to succeed in crafting and

utilizing policy instruments to achieve domestic economic and technological upgrading. This book will be of great interest to scholars of political economy and industrial policy in East Asia, as well as to scholars and policy professionals analyzing approaches to development strategy more broadly.

In this adventure motorsports memoir, the first Canadian motorcycle racer to complete the infamous Paris-Dakar Rally recounts his incredible journey. The Paris-Dakar Rally is without question the most arduous and notorious off-road motorsports event on the planet. Since its inception in 1979, it has attracted more than three thousand adventurers from all walks of life. The men and women who have taken up the "Dakar challenge" have at least one thing in common: a desire to measure themselves against the desolate sands of the Sahara. In 2001, Canadian adventure racer Lawrence Hacking entered what would be the last rally on the iconic route from Paris to Dakar. In *To Dakar and Back*, Hacking, in collaboration with motorsport journalist Wil De Clercq, recounts the three weeks of blood, sweat, and tears that took him on that ten thousand kilometer journey in the heat of competition from the glitzy streets of the French capital through the hinterland of North Western Africa and the triumph of self-realization.

The world of Champ Car auto racing was changing in the 1970s. As cars became more sophisticated, the cost of supporting a team had skyrocketed, making things difficult for team owners. In an effort to increase purses paid by racing promoters and win lucrative television contracts, a group of owners formed Championship Auto Racing Teams (CART)

in 1978. Soon after, CART split from its sanctioning body, the United States Auto Club (USAC). Though Champ Cars ran on numerous tracks, the Indianapolis 500 was the payday that supported most teams through the season. From the beginning, CART had most of the successful teams and popular drivers, and they focused on driving a wedge between the track owners and the USAC. Over the next 30 years, the tension between CART and USAC ebbed and flowed until all parties realized that reunification was needed for the sake of the sport. This book details the fight over control of Champ Car racing before reunification in 2008.

For decades there have been two iconic Japanese auto companies. One has been endlessly studied and written about. The other has been generally underappreciated and misunderstood. Until now. Since its birth as a motorcycle company in 1949, Honda has steadily grown into the world's fifth largest automaker and top engine manufacturer, as well as one of the most beloved, most profitable, and most consistently innovative multinational corporations. What drives the company that keeps creating and improving award-winning and bestselling models like the Civic, Accord, Odyssey, CR-V, and Pilot? According to Jeffrey Rothfeder - the first journalist allowed behind Honda's infamously private doors - what truly distinguishes Honda from its competitors, especially archrival Toyota, is a deep commitment to a set of unorthodox management tenets. The Honda Way, as insiders call it, is notable for decentralization over corporate control, simplicity over complexity and unyielding cynicism toward the status quo and whatever is assumed to be the truth - ideas embedded in the DNA of the company by its colourful founder Soichiro Honda, sixty-five years ago. With dozens of interviews of Honda executives, engineers, and frontline employees, Rothfeder shows how the company has developed and maintained its unmatched culture of innovation, resilience, and flexibility - and how it exported that culture to other countries that are strikingly different from Japan, establishing locally controlled operations in each region where it lays down roots. For instance, Rothfeder reports on life at a Honda factory in the tiny town of Lincoln, Alabama. When the American workers were trained to follow the Honda Way as a self-

sufficient outpost of the global company, their plant pioneered a new model for manufacturing in America. As Soichiro Honda himself liked to say, "Success can be achieved only through repeated failure and introspection. In fact, success represents one percent of your work, which results only from the ninety-nine percent that is called failure."
