5.7L GM Vortec V8 Base Marine

Engine

The Vortec V8 Marine engine started in 1998 and can be identified by having 8 total intake bolts holding the intake manifold to the cylinder heads. The bolts go straight down instead of at an angle like all previous V8 Engines. The engine also has an unfinished fuel pump boss which means it must use an electric fuel pump.

marine vs. automotive - Vortec. Discussion in 'Sterndrives' started by ... The GM cam is used in both the high torque 383 engine and also the Ramjet 350, and is very similar to my stock impala cam. You can go here and see the torque ... 4200 seems a little low for max rpm. GM lists peak hp for both the 305 and 350 marine engines at about 4800 ...

Torque Specifications for a Chevy 350 | It Still Runs

One may consider that engines making torque at a lower rpm tend to work better in marine applications due to the fact that "most" boats tend to plane in the range of 2,000 -

3,000 rpm. It's not by chance that most marine engine manufacturers continue using the larger displacement - lower rpm, cast iron marine engines because of this fact.

Installed Vortec heads on a standard 1986 reman 5.7 motor with roller lifters. My manual only goes up to 1996. I torqued the head bolts 3 times and in the sequence the manual said to. 22lbs, 44lbs and then 66lbs. Is this the same torque specs for the vortec head ? What is the torque spec and sequence for the vortec intake manifold ?
