Some storms destroy. Others clear a path. Military veteran Amelia Storm returns to her

hometown of Chicago when her beloved police officer brother is killed in the line of duty. Now she is a special agent with the FBI. No longer a scared girl, she vows to avenge her brother and do what she can to end the city's deep wells of corruption. A television documentary puts a spotlight on a four-year-old kidnapping. Amelia and her colleagues in the Organized Crime Division know there's more to the girl's case than meets the eye. The twelve-year-old wasn't just abducted. She was targeted by a human trafficking ring. As Amelia falls deeper down the rabbit hole of Chicago's criminal hierarchy in search of the girl, she finds herself uncomfortably close to the people

she left behind so long ago. This time, though, she won't run. Now, she is the storm that will unearth the city's long buried secrets. Or die trying. After all, she has nothing to lose. From the wickedly dark minds of Mary Stone and Amy Wilson comes *Storm's Fury*, book one of the Amelia Storm Series, where you'll be reminded that Mother Earth is wild, but humans are the most dangerous creatures. Based on the six-year NASA

Aviation Safety and Security Program Human Performance Modeling project, a collaboration of five teams from industry and academia, Human Performance Modeling in Aviation chronicles the results of modeling NASA-supplied data on two aviation flight deck problems: pilot surface operations taxi errors, and approach and landing with synthetic vision systems. The book provides a deep understanding of the aviation problems and “what-if” system redesigns of flight

deck technologies and procedures. Five modeling teams describe how they applied their models to these two problems and discuss the results in terms of the specific problems addressed, the modeling challenges faced, and the modeling solutions developed to address complex, real-world situations. The book then compares the five modeling tools used, shedding light on the unique approach that each brings to bear on two qualitatively different problems. It includes a

---

“virtual roundtable discussion” that poses questions to each of the five teams and offers take-home lessons and insights into the modeling process and its complexities. The modeling teams also explore the issue of model validation and the approach that they adopted. Concluding with a summary of how modeling fits into the system design and evaluation process, the text covers state-of-the-art advances in human performance modeling for complex systems. Critical for modeling aviation-domain

tasks, these modeling capabilities can also be applied to other complex-system domains such as process control, medical applications, surface transportation, and military command and control, which share similar human-system interaction issues.
