The Origin of Competitive Strength Prentice Hall

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This

book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst.

There is something new in the financial planning world and it is explored to the point that the reader can exploit it in "Hindsight – The Foresight Saga." Little has been written about the property market and its relationship with the equity markets or the coincidental relationship that that investment relationship has on bankers. This book is aimed at the private investor but also the professional investment manager because it highlights the mechanism that provides for an almost continuous steady flow of positive returns on invested capital and regular savings. The author is a well experienced, highly qualified strategic financial planner and the language used in the book is straightforward and down to earth. The classic marketTM is identified as a circa fifteen year cycle of at one point inversely correlated market movements that works in direct contrast to a later phase in the classic market TM where property and equity movements are highly correlated in a downward slide. The first having an extremely positive effect on banking and the second, a devastating effect that contributed to bank collapses similar to those in 1979, 1992 and 2008.
