Test-based accountability systems that attach high stakes to standardized test results have raised a number of issues on educational assessment and accountability. Do these high-stakes tests measure student achievement accurately? How can policymakers and educators attach the right consequences to the results of these tests? And what kinds of tradeoffs do these testing policies introduce? This book responds to the growing emphasis on high-stakes testing and offers recommendations for more-effective test-based accountability systems.

Contributions by: Rosemarie Jensen, Shaun Johnson, Morna McDermott, Laurie Murphy, Peggy Robertson, Ruth Rodriguez, Tim Slekar, Ceresta Smith, United Opt Out National Forward by Ricardo Rosa, University of Massachusetts, Dartmouth This book is intended for educators, parents and community activists interested in reclaiming our public schools and reclaiming the public narrative around education policy. The book infuses research about the recent history of education policy reform, the strategies United Opt Out uses for fighting back against these policies, and proposes solutions that work to create sustainable, equitable, anti-racist, democratic and meaningful public education. This book is for anyone interested in an "insider's look" behind the scene of forming an organization, or leading a resistance. Simultaneously the book provides scholarly-based research about the broader issues, policies and data around education reform, and the opt out movement. Education policy has been heating up ever since NCLB but especially since the roll out of Race to The Top and the Common Core State Standards. Nationally publicized debates and discord over these policies are garnering public attention of teachers, parents, and whole communities. We hope this book will add to the library of other recent books such as Mercedes Schneider's A Chronicle of Echoes (2014), Diane Ravitch's Reign of Error (2013) and Bowers & Thomas (eds) Detesting and Degrading Schools (2012), that have exposed the complex corporate interest in shaping education policies and the destructive influence such policies will have on our children and on our democracy. This book uses first person narratives infused with research and scholarship, to create personalized accounts into the life of education activism. Each chapter includes an Activists Handbook section to provide support for our activist/readers in their own efforts. We hope that our experiences will inspire others to take this charge upon themselves as well.

The inventions and inspiration of Benjamin Franklin and how they've stood the test of time What would you do if you lived in a community without a library, hospital, post office, or fire department? If you were Benjamin Franklin, you'd set up these organizations yourself. Franklin also designed the lightning rod, suggested the idea of daylight savings time, and invented bifocals-all inspired by his common sense and intelligence. In this informative book, Gene Barretta brings Benjamin Franklin's genius to life, deepening our appreciation for one of the most influential figures in American history. The Reflective Educator's Guide to Professional Development Createspace Independent Publishing Platform
Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of

humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
