As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one

Saturn you should buy.

Toyota – enough apologies: "when you mess up, 'fess up."

Toyota's sustained growth attracts the attention of economists and industrialists around the world eager to learn the secrets of Toyota's lasting success. In *Inside the Mind of Toyota: Management Principles for Enduring Growth*, Satoshi Hino examines the source of Toyota's strength: the fundamental thinking and management structures that lie beneath the creation of its famed Toyota Production System. From the perspective of a professional with 30 years experience in the auto industry, Hino presents a fresh and detailed analysis of Toyota's essential management system, from its very beginnings into the 21st century. The ultimate goal is not simply to mimic Toyota's formula, but to learn from it and, in doing so, surpass it. From the Translator's Foreword: Unlike most

Toyota watchers, Hino urges us to set our sights not on replicating Toyota's success, but on surpassing it. This point is crucial, because it moves our attention away from slavish imitation of what is visible on the surface and challenges us to tap into deeper and more powerful mechanisms of excellence. This is not a cookbook and it is not 'Toyota Lite.' It deserves serious study, application and experimentation. Learn how Toyota thinks, Hino is telling us. Learn Toyota's strengths, make them your own and then exceed them.

Automobile Book 2002
This is the most recent report of the National Research Council's Standing Committee to Review the Research Program of the Partnership for a New Generation of Vehicles (PNGV), which has conducted annual reviews of the PNGV program since it was established in late 1993. The PNGV is a cooperative R&D program between the

federal government and the United States Council for Automotive Research (USCAR, whose members are DaimlerChrysler, Ford Motor Company, and General Motors) to develop technologies for a new generation of automobiles with up to three times the fuel economy of a 1993 midsize automobile. The reports review major technology development areas (four-stroke direct-injection engines, fuel cells, energy storage, electronic/electrical systems, and structural materials); the overall adequacy of R&D efforts; the systems analysis effort and how it guides decisions on R&D; the progress toward long-range component and system-level cost and performance goals; and efforts in vehicle emissions and advanced materials research and how results target goals. Unlike previous reports, the Seventh Report comments on the goals of the program, since the automotive market and U.S. emission standards have changed significantly since the program was initiated.
