In *As the Broken White Lines Become One*, Michael Gehring recounts his spiritual journey through the landscape of late-twentieth-century southern American Christianity. This account depicts how and why he drifted away from the Roman Catholic Church, fellowshipped for a while with the Assemblies of God, sojourned for a prolonged time as an outsider to the institutional church, and

eventually found a theological home within United Methodism. What follows is a spiritual journey with a lot of turns. The work is not intended to be a complete autobiography. Significant biographical details and relationships are not included as this narrative focuses on the shifting and sifting grounds of American Christian denominations. This chronicle primarily concerns the spiritual journey that led him to United Methodism and what it was like, not only to choose it, but also to inhabit it.

For decades there have been two iconic Japanese auto companies. One has been endlessly studied and written about. The other has been generally underappreciated and misunderstood. Until now. Since its birth as a motorcycle

company in 1949, Honda has steadily grown into the world's fifth largest automaker and top engine manufacturer, as well as one of the most beloved, most profitable, and most consistently innovative multinational corporations. What drives the company that keeps creating and improving award-winning and bestselling models like the Civic, Accord, Odyssey, CR-V, and Pilot? According to Jeffrey Rothfeder - the first journalist allowed behind Honda's infamously private doors - what truly distinguishes Honda from its competitors, especially archrival Toyota, is a deep commitment to a set of unorthodox management tenets. The Honda Way, as insiders call it, is notable for decentralization over corporate control, simplicity over complexity and unyielding cynicism toward the status quo and whatever is assumed to be the truth - ideas embedded in the DNA of the company by its colourful founder Soichiro Honda, sixty-five years ago. With dozens of interviews of Honda executives, engineers, and frontline employees, Rothfeder shows how the company has developed and maintained its unmatched culture of innovation, resilience, and flexibility - and how it exported that culture to other countries that are strikingly different from Japan, establishing locally controlled operations in each region where it lays down roots. For instance, Rothfeder reports on life at a Honda factory in the tiny town of Lincoln, Alabama. When the American workers were trained to follow the Honda Way as a self-sufficient

outpost of the global company, their plant pioneered a new model for manufacturing in America. As Soichiro Honda himself liked to say, "Success can be achieved only through repeated failure and introspection. In fact, success represents one percent of your work, which results only from the ninety-nine percent that is called failure."

The proceedings of a congress concerning Open Communications, the basis for cost effective Computer Integrated Manufacturing (CIM), are presented. The congress was sponsored by the Commission of the European Communities, DG XIII (Telecommunications, Information Industries and Innovation), at Stuttgart's Annual Machine Tool Fair, 4-7 September 1990. The book provides an overview of international initiatives on

implementing open communications in manufacturing/engineering environments, including available communication products on the market. Topics covered encompass industrial needs for open systems for manufacturing, pilot implementations in the USA, Japan and Europe, and introduction to MMS (Manufacturing Message Specification) and NMT (Network Management). Technological solutions that enable the implementation of real multi-vendor environments and allow the full integration from design to manufacture or from order to distribution are also explained. Furthermore, the book highlights the work done in the ESPRIT flagship project, "Communication Network for Manufacturing Applications". During the project's lifetime several experimental and industrial pilot sites were commissioned and these are explained in detail. The book is unique in that it describes both the business strategy and the technological approach. It is aimed at decision makers and people that need to have an up-to-date technical understanding and awareness of future trends in manufacturing systems. Production Engineers, Systems Engineers, Technical

Managers, Business Managers, EDP Staff, and Academics will find it useful. *Thoracic Imaging, An Issue of Radiologic Clinics of North America, E-Book* Wipf and Stock Publishers

Aurora kinases are key mitotic regulators that have also been associated with tumor development and

progression. The interest on this highly conserved family of protein kinases has grown exponentially since they were discovered in the 1990s. Despite the steady increase in the number of laboratories involved and the consequent boost of the volume of research output during the last years, the study of Aurora kinases remains a very dynamic area in which new discoveries frequently keep coming to light. In this Frontiers Research Topic, we have aimed to not only review and revisit different aspects of the functions and regulation of Aurora kinases but also provide a forum for the publication of new developments in the field. Thanks to the excellent work of the authors and reviewers of this eBook, which includes some of the most experienced voices in the field, we hope that this collection will inspire new research projects that will lead to a better understanding of the role of these kinases in cancers.
