This book investigates how Erasmus viewed non-Christians and different races, including Muslims, Jews, the indigenous people of the Americas, and Africans. Nathan Ron argues that Erasmus was devoted to Christian Eurocentrism and not as tolerant as he is often portrayed.

Erasmus' thought is situated vis-à-vis the thought of contemporaries such as the cosmographer and humanist Aeneas Sylvius Piccolomini who became Pope Pius II; the philosopher, scholar, and Cardinal, Nicholas of Cusa; and the Dominican missionary and famous defender of the Native Americans, Bartolomé Las Casas. Additionally, the relatively moderate attitude toward Islam which was demonstrated by Michael Servetus, Sebastian Franck, and Sebastian Castellio is analyzed in comparison with Erasmus' harsh attitude toward Islam/Turks.

Every Officer is a Leader: Transforming Leadership in Police, Justice, and Public Safety, authored by leadership expert Terry Anderson and several well known leaders in the law enforcement and criminal justice profession, responds to the need for a comprehensive leadership development model for the education and training of police, justice and public safety supervisors, managers and front line officers. He examines how leadership development has a profound impact on the morale and performance of individual officers, teams, and organizations, illustrating in depth and detail how police and other justice and public safety leaders (in corrections, fire, customs, immigration, security, courts, etc.) can implement the Transforming Leadership process, skills, and principles.

The recent focus (during the past 10 years) on community policing initiatives has made competency based leadership skills training essential for front line officers. The author's innovative contribution is a focus on the necessity to build "a leadership organization" before - and to an extent, while - you move ahead into building a "learning organization" that is responsive to community and internal organizational needs. The personal, team, and organization development skills discussed in this book are necessary pre-requisites to

successful implementation of any neighborhood or community policing initiatives. Every Officer is a Leader: Transforming Leadership in Police, Justice, and Public Safety provides a model for integrating other models into a holistic leadership development framework. It furnishes a map for developing critical leadership skills with self-assessment, includes the developmental aspects of leadership expert Terry Anderson's previous book on Transforming Leadership, and applies them to law enforcement and criminal justice. Anderson and his contributing authors add clarity, perspective, and examples to show how individual leaders can develop themselves, and one another, into high-performance team leaders and officers who motivate others to respond to issues that affect the morale, health, and safety of the communities in which they serve. This new focus adds a perspective on security issues that affect police, justice and public safety organizations.

Powerplants of the Future John Wiley & Sons Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
