This book analyses the emergence, strategies, and outcomes of the struggle to embed democratic governance and constitutional order in Kenya, showcasing both the power and the limits of citizen agency in the struggle to transform a postcolonial African state. Utilising data from primary interviews, media, and existing literature, this book analyses the emergence, diffusion, operational strategies, and outcomes of Kenyan constitutional reform struggles with a view to highlighting both the power and limits of social movement in transforming a postcolonial African state. It engages intersections of social movement and theories of democratisation to probe the production, operations, and outcomes of the disruptive yet creative power of the movements at the centre of the struggle to transform the Kenyan constitution. The book also appraises the "meanings" of, and developments after, the promulgation of the 2010 constitution with a view

to illuminating the prospects for a transformative democratic political order in Kenya. This book is a useful tool in understanding the struggles specific to Kenya, but also offers insights into other democratic struggles on the African continent and beyond. This book will be of interest to students and scholars of social movements and political change in Africa in general and Kenya in particular.

The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the

implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and

strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation.
