Post Normal Accident revisits Perrow's classic Normal Accident published in 1984 and provides additional insights to our sociological view of safety-critical organisations. The operating landscape of high-risk systems has indeed profoundly changed in the past 20 to 30 years but the core sociological models of safety remain associated with classics of the 1980s and 1990s. This book examines the conceptual and empirical evolutions of the past two to three decades to explore their implications for safety management based on several strands of works in various research traditions in safety (e.g. cognitive engineering and system safety, high-reliability organisation, sociology of safety, regulatory studies) and other interdisciplinary fields (e.g. international business, globalisation studies, strategy management, ecology). It offers a new and insightful interpretation to the challenges of today. It investigates how globalisation has reconfigured the operating landscape of high-risk systems and emphasises the importance of thinking safety through a strategic angle. This book serves as an ideal resource for the safety professionals and safety researchers from any established disciplines such as sociology, engineering, psychology, political science or management. Features: Introduces an original analysis of popular safety writings, including Normal Accident, by Perrow Identifies the importance of thinking safety from a sociological angle with the help of key writers Stresses the need for greater sensitivity to strategy and "errors from the top" when it comes to the safety of high-risk systems Explains how globalisation has reconfigured the operating landscape of high-risk systems Renews our understanding of the current safety management challenges in an increasingly global risk picture

This history traces the development of helicopters in the Marine Corps from 1962 to 1973 and is the second in a series of two volumes which between them cover the story of Marines and helicopters from 1946 to the present. In the period covered by this volume, the Marines at last acquired helicopters fully capable of carrying out an amphibious vertical assault, and they further elaborated their helicopter doctrines and tactics. In the Vietnam war, pilots and machines met and surmounted the test of actual combat. The documentary basis for this monograph was primarily the official records of the Marine Corps and Navy Department, but considerable use was made of interviews and correspondence with key individuals involved in all phases of helicopter development. One of the most pervasive characteristics of man is hindsight. It masquerades under many guises: Monday morning quarterbacking, second guessing, and historical writing. When viewed through time, the past becomes distorted. Problems seem simpler, the choices more clear, and the conditions less complex than those of the present. The men who played a part become more heroic or more villainous than they were in life. This volume is an attempt to portray accurately the difficulties faced and the obstacles conquered by the men who developed helicopters in the Marine Corps, so that the Marines of today and the future may meet the challenges of their own times with the same dedication as their predecessors. The men who developed helicopters in the Marine Corps had nothing more to rely on than their knowledge of what had preceded them, intelligence liberally used, and both mental and physical courage. The present-day Marine will be well served if he applies nothing more.
