Install the manual tensioner. Turn the tensioner adjusting bolt in by hand until resistance is felt. Start the engine. Back off the tensioner bolt until you start to hear cam chain noise, then turn the bolt in until the noise disappears.)It only takes about

about 4 lbs of pressure against the tensioner blase to keep the chain from making noise.

hello all so i traded
my blown up trx450
for a 400ex bored to
440 runs and rides
great plenty of power
came with a spare
motor and 2 good
440 cylinders and
pistons. but it has a
slight tick i checked
the timing chain
tensioner and its
maxed so i assume it

needs a timing chain
no big deal. but my
question is will a
manual chain adjuster
allow me to take the
slack out and quiet up
the chain ...

Todd, the advantages of a manual tensioner on a normal engine are slim to none.

However, engines with decked heads like to eat cam chains fairly quickly - see the cam chain on the right in the pic below...that's my cam chain after using it with a decked head.

Honda TRX Forum - 400ex manual timing chain tensioner

Sure enough, timing was way far out, timing chain incredibly loose. So for fun I re-tensioned the timing chain and re timed it, got about 120lbs of

compression, pretty never need adjusting. low. I cannot get the chain very tight but the the tensioner seems to work fine, the chain guides don't look very worn.

Manual Vs. Mechanical Cam Chain Tensioner - General Dirt ...
Manual tensioners are by far a better way to go. Once set, they almost

OEM 'automatic' ones tend to over tighten the chain, causing it to wear out prematurely and are the cause of many 4S 'skipping a tooth' on a cam and bending a valve.

The issue with a manual one, is people do not understand how to adjust them. Simply to do really.
