Nations in all regions of the world today share a common international sales law, The United Nations Convention on Contracts for the International Sale of Goods (CISG). The Convention was prepared by the United Nations Commission on International Trade Law (UNCITRAL) and adopted by a diplomatic conference on 11 April 1980. Since then, the number of countries that have adopted the CISG account for over two-thirds of all world trade. The area of international sales law continues to grow as technology and development take us to a global economy. As such, the study of the CISG has become an integral component of this ever-growing area of international commercial law. The Review of the CISG is published once yearly and features articles written by prominent legal scholars in the field of international sale of goods from around the world. In addition to scholarly writings analyzing the various articles of the CISG, the book seeks to compile translations of recent decisions as well as commentaries of notable cases relating to the CISG. The Review of the CISG provides both a forum for legal discussion within the international legal community in the area of international sales law and as an authoritative source of reference for international scholars.

*Automotive Industries* Kluwer Law International B.V.

The most trustworthy source of information available today on savings and investments, taxes, money management, home ownership and many other personal finance topics.

May 4, 1920 CRC Press

The exponential increase in the development of technology coupled with the customers' immense desire to possess the newest technological products makes for truncated product lifespans, which instigates a substantial upsurge in their rate of disposal. Attempts have been made to establish specialized product recovery facilities with the intention of diminishing the volume of accumulated waste delivered to landfills using product recovery procedure such as remanufacturing. The economic benefits produced by remanufacturing also portray the role of product recovery in a more attractive light. The quality of a remanufactured product is uncertain for some consumers. Therefore, these consumers possess insecurities in deciding whether or not the remanufactured products will render the same expected performance. This ambiguity regarding a remanufactured product could possibly result in the consumer deciding against its purchase. With such consumer apprehension, remanufacturers often seek market mechanisms that provide reassurance as to the stable durability that these products still maintain. One strategy that the remanufacturers often use is the utilization of the premise of offering product warranties with preventive maintenance on their products. This book is concerned with the practice and theory of warranty management and preventive maintenance, particularly in relation to

remanufactured products' warranties. Models developed in this book can be used for making the right decisions in offering renewable, nonrenewable, one and two dimensional warranty policies, and for managerial decision in considering maintenance contracts or outsourcing maintenance for remanufactured components and products. Features Discusses a variety of warranty policies and preventive maintenance of remanufactured products (first book to do so) Presents mathematical models and applications for warranty policies using examples and simulation results Considers cost and optimization problems from the remanufacturer's and buyer's points of views Provides a foundation for academicians interested in building models in the area of warranty and preventive maintenance analysis of remanufactured products Offers the essential methodology needed by practitioners involved with warranty and preventive maintenance analysis, along with extensive references for further research
