The rate of growth of stainless steel has outpaced that of other metals and alloys, and by 2010 may surpass aluminum as the second most widely used metal after carbon steel. The 2007 world production of stainless steel was approximately 30,000,000 tons and has nearly doubled in the last ten years. This growth is occurring at the same time that the production of stainless steel continues to become more consolidated. One result of this is a more widespread need to understand stainless steel with fewer resources to provide that information. The concurrent technical evolution in stainless steel and increasing volatility of raw material prices has made it more important for the engineers and designers who use stainless steel to make sound technical judgments about which stainless steels to use and how to use them.

Refugees have rarely been studied by economists. Despite some pioneering research on the economic lives of refugees, there remains a lack of theory and empirical data through which to understand, and build upon, refugees' own engagement with markets. Yet, understanding these economic systems may hold the key to rethinking our entire approach to refugee assistance. If we can improve our knowledge of the resource allocation systems that shape refugees' lives and opportunities, then we may be able to understand the mechanisms through which these market-based systems can be made to work better and turn

humanitarian challenges into sustainable opportunities.

This book adopts an inter-disciplinary approach, based on original qualitative and quantitative data on the economic life of refugees, in order to begin to build theory on the economic lives of refugees. It focuses on the case of Uganda because it represents a relatively positive case. Unlike other governments in the region, it has taken the positive step to allow refugees the right to work and a significant degree of freedom of movement through its so-called 'Self-Reliance Strategy'. This allows a unique opportunity to explore what is possible when refugees have basic economic freedoms. The book shows that refugees have complex and varied economic lives, often being highly entrepreneurial and connected to the global economy. The implications are simple but profound: far from being an inevitable burden, refugees have the capacity to help themselves and contribute to their host societies - if we let them

Combustion of Energetic Materials McGraw Hill Professional

This edited collection brings together a selection of expert authors and draws on a wide range of case studies, geographies, and perspectives to explore the links between forced migration and energy access. This book addresses the paucity of academic study on how energy is delivered to the millions of people currently forcibly displaced. The contributions throughout assess the current energy governance regimes, models of delivery, and innovative solutions that are dictating how energy is – and can be – provided to those who have been forced to move away from their homes. By bringing together author-teams of practitioners, academics, businesses, and policy makers, this collection encourages interdisciplinary dialogue about the best way of approaching energy provision for the forcibly displaced. This book will be of great interest to students and scholars of energy access and policy, environmental justice and equity, and migration and refugee studies.

Who is not captivated by tales of Islanders earnestly scanning their watery horizons for great fleets of cargo ships bringing rice, radios and refrigerators - ships that will never arrive? Of all the stories spun about the island peoples of Melanesia, tales of cargo cult are among the most fascinating. The term cargo cult, Lamont Lindstrom contends, is one of anthropology's most successful conceptual offspring. Like culture, worldview and ethnicity, its usage has steadily proliferated, migrating into popular culture where today it is used to describe an astonishing roll-call of people. It's history makes for lively and compelling reading. The cargo cult story, Lindstrom shows, is more significant than it at first appears, for it recapitulates in summary form three generations of anthropological theory and Pacific studies. Although anthropologists' enthusiasm for the notion of cargo cult has waned, it now colors outsiders' understanding of Melanesian culture, and even Melanesians' perceptions of themselves. The repercussions for contemporary Islanders are significant: leaders of more than one political movement have felt the need to deny that they are any kind of cargo

cultist. Of particular interest to this history is Lindstrom's argument that accounts of cargo cult are at heart tragedies of thwarted desire, melancholy anticipation and crazy unrequited love. He makes a convincing case that these stories expose powerful Western scenarios of desire itself—giving cargo cult its combined titillation of the fascinating exotic and the comfortably familiar.
