### **JUSTICE FREEDOM**

HERBS is a book of activist poems written in garden metaphors. It is also a book of garden poems that suggest social justice themes.

Sometimes the garden, its herbs and other produce, are foregrounded; sometimes civil

rights issues and experiences take that primary role.

Throughout the volume, the two concerns are closely linked, and each becomes a way of talking about the other. Both require nurturing, both sometimes disappoint and frustrate, both are sources of gratification, growth, and healing. The mostly free verse poems in this book conjure up family, the poet's personal past, and larger issues of history, all within the framework of one woman's close and empathetic skill of observation."

This volume addresses virtual reality (VR) -- a tantalizing communication medium whose essence challenges our most deeply held notions of what communication is or can be. The editors have gathered an expert team of engineers,

social scientists, and cultural theorists for the first extensive treatment of human communication in this exciting medium. The first part introduces the reader to VR's state-of-the-art as well as future trends. In the next section, leading research scientists discuss how knowledge of communication can be used to build more effective and exciting communication applications of virtual reality. Looking ahead, the authors explore pioneering approaches to VR narratives, interpersonal communication, the use of 3D sound, and the building of VR entertainment complexes. In the final section, the authors zoom out to view the big picture -- the psychological, social, and cultural implications of virtual reality. Thought-provoking discussions consider important communication issues such as:

- \* How will virtual reality influence perception of reality?
- \* What are the legal issues defining communication in virtual reality?
- \* What kind of cultural trends will this technology encourage?

Accra joins Lagos, Nairobi, Marrakech, and Addis Ababa in representing the African continent in the Noir Series arena. "The anthology *Accra Noir* edited by Nana-Ama Danquah captures the hustle of several distinctive neighborhoods of Ghana's capital." --The Millions, included in Nadia Owusu's *Year in Reading* (2020) "Thirteen tales of the trouble people find in the capital city of Ghana when they're trying to make a buck...There's plenty of noir to go around in this all-too-sad volume about people struggling to get by." --Kirkus Reviews, Starred review "This spine-chilling 13-story collection offers an opportunity to

'consider the context, beware of a pretext, search for a subtext' on living--and dying--in a major metropolis consumed by poverty and desperation." --Shelf Awareness for Readers, **STARRED Review** "Superb...Each story reaffirms how fundamental 'place' is to the noir genre and how the locale shapes the story as much as the characters themselves...Strongly recommended." --Library Journal "This welcome volume in the Akashic noir series, set in Ghana, hits plenty of the expected bleak notes and classical noirish phrasings." --Publishers Weekly "There's good writing as well as a strong sense of place and culture, and the reader will absorb a side of Accra that doesn't make it into the tourist brochures." --New York Journal of Books "Within this new book, the authors who share their many stories do so in a much revealing way about Accra, a city of allegories, one of the most dynamic and diverse places in the world." --Exclusive Magazine "I was blown away by these stories, and

---

would encourage lovers of noir fiction to try these out. They are gritty enough to fill your noir needs.” --The Cyberlibrarian Akashic Books continues its award-winning series of original noir anthologies, launched in 2004 with Brooklyn Noir. Each book comprises all new stories, each one set in a distinct neighborhood or location within the respective city. Brand-new stories by: Nana Ekua Brew-Hammond, Kwame Dawes, Adjoa Twum, Kofi Blankson Ocansey, Billie McTernan, Ernest Kwame Nkrumah Addo, Patrick Smith, Anne Sackey, Gbontwi Anyetei, Nana-Ama Danquah, Ayesha Harruna Attah, Eibhlín Ní Chléirigh, and Anna Bossman. From the introduction by Nana-Ama Danquah: Accra is the perfect setting for noir fiction. The telling of such tales--ones involving or suggesting death, with a protagonist who is flawed or devious, driven by either a self-serving motive or one of the seven deadly sins--is woven into the fabric of the city’s everyday life... Accra is more than just a capital city. It is a microcosm of Ghana. It is a virtual map of the nation’s soul, a complex geographical display of its indigenous presence, the colonial imposition, declarations of freedom, followed by coups d’état, decades of dictatorship, and then, finally, a steady march forward into a promising future... Much like Accra, these stories are not always what they seem. The contributors who penned them know too well how to spin a story into a web...It is an honor and a pleasure to share them and all they reveal about Accra, a city of allegories, one of the most dynamic and diverse places in the world.

*It's Great to be an Engine*  
CarTech Inc

To extract maximum performance, an engine needs an efficient, well-designed, and properly tuned exhaust system. In fact, the exhaust system's design, components, and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the parts, and fabricate the exhaust system that delivers the best performance for car and particular application.

Master engine builder and award-winning writer Mike Mavrigian explains exhaust system principles, function, and components in clear and concise language. He then details how to design, fabricate, and fit exhaust systems to classic street cars as well as for special and racing applications. Air/exhaust-gas flow dynamics and exhaust system design are explained. Cam duration and overlap are also analyzed to determine how an engine breathes in air/fuel, as the exhaust must efficiently manage this burned mixture. Pipe bending is a science as well as art and you’re shown how to effectively crush and mandrel bend exhaust pipe to fit your header/manifold and chassis combination. Header tube diameter and length is taken into account, as well as the most efficient catalytic converters and resonators for achieving your performance goals. In addition, Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems. When building a high-performance engine, you need a high-performance exhaust system that’s tuned and fitted to that engine so you can realize maximum performance. This

comprehensive book is your guide to achieving ultimate exhaust system performance. It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car. No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high-performance applications.

Perhaps the most charismatic automobile ever, the Volkswagen Beetle was the longest-running, most-manufactured automobile on a single platform of all time. From 1938 to 2003, more than 21.5 million "Bugs" were assembled, distributed, and sold on nearly every continent in the world. Throughout the Beetle's successful run, many of these cars have been relegated to project car status due to their age or condition. Airkooled Kustoms, a VW restoration shop in Hazel Green, Alabama, brings its expertise in restoring these cars to book form with this all-encompassing compilation. Restoring your Beetle is covered through step-by-step

sequences from unbolting that first nut through polishing the paint on your freshly restored Bug. The specialists at Airkooled Kustoms walk you through the proper disassembly methods, restoring versus replacing components, and reassembling your restored Bug, covering everything related to the body, undercarriage, and interior along the way. It's about time a thorough, hands-on restoration book has been authored by authorities who know the Beetle like the back of their hands. With this book, you will have everything you need to bring your old or new VW Beetle project back to life.

Survival of the City  
CarTech Inc

One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated. Cities can make us sick. They always have—diseases spread more easily when more people are close to one another. And disease is hardly the only ill that accompanies urban density. Cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on. But cities have flourished nonetheless because they are humanity's greatest invention, indispensable engines for creativity, innovation, wealth, and connection, the loom on which the fabric of civilization is woven. But cities now stand at a crossroads. During the global COVID crisis, cities grew silent as people worked from home—if they could work at all. The normal forms of socializing ground to a halt. How permanent are these changes? Advances in digital technology mean

---

that many people can opt out of city life as never before. Will they? Are we on the brink of a post-urban world? City life will survive but individual cities face terrible risks, argue Edward Glaeser and David Cutler, and a wave of urban failure would be absolutely disastrous. In terms of intimacy and inspiration, nothing can replace what cities offer. Great cities have always demanded great management, and our current crisis has exposed fearful gaps in our capacity for good governance. It is possible to drive a city into the ground, pandemic or not. Glaeser and Cutler examine the evolution that is already happening, and describe the possible futures that lie before us: What will distinguish the cities that will flourish from the ones that won't? In America, they argue, deep inequities in health care and education are a particular blight on the future of our cities; solving them will be the difference between our collective good health and a downward spiral to a much darker place.

The first book of its kind, *How to Rebuild the Honda B-Series Engine* shows exactly how to rebuild the ever-popular Honda B-series engine. The book explains variations between the different B-series designations and elaborates upon the features that make this engine family such a tremendous and reliable design. Honda B-series engines are some of the most popular for enthusiasts to swap, and they came in many popular Honda and Acura models over the years, including the Civic, Integra, Accord, Prelude, CRX, del Sol, and even the CR-V. In this special Workbench book, author Jason Siu uses more than 600 photos, charts, and illustrations to give simple step-by-step instructions on disassembly, cleaning, machining tips, pre-assembly fitting, and final assembly. This book gives considerations for both stock and performance rebuilds. It also guides you through both the easy and tricky procedures, showing you how to rebuild your engine and ensure it is working perfectly. Dealing with considerations for all B-series engines-foreign and domestic, VTEC and non-VTEC-the book also illustrates many of the wildly vast performance components, accessories, and upgrades available for B-series engines. As with all Workbench titles, this book details and highlights special components, tools, chemicals, and other accessories needed

to get the job done right, the first time. Appendices are packed full of valuable reference information, and the book includes a Work-Along-Sheet to help you record vital statistics and measurements along the way. You'll even find tips that will help you save money without compromising top-notch results.

### *Electronic Engine Tuning* Cartech

During the muscle car wars of the 1960s, Holley carburetors emerged as the carbs to have because of their easy-to-tune design, abundance of parts, and wide range of sizes. The legendary Double Pumper, the universal 600-cfm 1850 models, the Dominator, and now the Avenger have stood the test of time and are the leading carburetors in the high-performance engine market. To many enthusiasts, the operation, components, and rebuilding procedures remain a mystery. Yet, many carburetors need to be rebuilt and properly set up for a particular engine package. Veteran engine building expert and automotive author Mike Mavrigian guides you through each important stage of the rebuilding process, so you have the best operating carburetor for a particular engine and application. In addition, he explains carb identification as well as idle, mid-range and high-speed circuit operation, specialty tools, and available parts. You often need to replace gaskets, worn parts, and jets for the prevailing weather/altitude

conditions or a different engine setup. Mavrigian details how to select parts then disassemble, assemble, and calibrate all of the major Holley carburetors. In an easy-to-follow step-by-step format, he shows you each critical stage for cleaning sensitive components and installing parts, including idle screws, idle air jets, primary/secondary main jets, accelerator pumps, emulsion tubes, and float bowls. He also includes the techniques for getting all of the details right so you have a smooth-running engine. Holley carburetor owners need a rebuilding guide for understanding, disassembling, selecting parts, and reassembling their carbs, so the carb then delivers exceptional acceleration, quick response, and superior fuel economy. With *Holley Carburetors: How to Rebuild* you can get the carb set up and performing at its best. And, if desired, you can move to advanced levels of tuning and modifying these carbs. If you're looking for the one complete book that helps you quickly and expertly rebuild your Holley and get back on the road, this book is a vital addition to your performance library.

New Philadelphia, Illinois, was founded in 1836 by Frank McWorter, a Kentucky slave who purchased his own freedom and then acquired land on the

prairie for establishing a new—and integrated—community. McWorter sold property to other freed slaves and to whites, and used the proceeds to buy his family out of slavery. The town population reached 160, but declined when the railroad bypassed it. By 1940 New Philadelphia had virtually disappeared from the landscape. In this book, Paul A. Shackel resurrects McWorter's great achievement of self-determinism, independence, and the will to exist. Shackel describes a cooperative effort by two universities, the state museum, the New Philadelphia Association, and numerous descendants to explore the history and archaeology of this unusual multi-racial community.

Engine production for the typical car manufactured today is a study in mass production. Benefits in the manufacturing process for the manufacturer often run counter to the interests of the end user. What speeds up production and saves manufacturing costs results in an engine that is made to fall within a wide set of standards and specifications, often not optimized to meet the original design. In short, cheap and fast engine production results in a sloppy final product. Of course, this is not what enthusiasts want out of their engines. To maximize the performance of any engine, it must be balanced and blueprinted to the exact tolerances that the factory should have adhered to in the first place. Four cylinder, V-8, American or import, the performance of all engines is greatly improved by balancing and blueprinting. Dedicated enthusiasts and professional racers balance and blueprint their engines because the engines will produce more horsepower and torque, more efficiently use fuel, run cooler and last longer. In this book, expert engine builder and

veteran author Mike Mavrigian explains and illustrates the most discriminating engine building techniques and perform detailed procedures, so the engine is perfectly balanced, matched, and optimized. Balancing and blueprinting is a time consuming and exacting process, but the investment in time pays off with superior performance. Through the process, you carefully measure, adjust, machine and fit each part together with precision tolerances, optimizing the design and maximizing performance. The book covers the block, crankshaft, connecting rods, pistons, cylinder heads, intake manifolds, camshaft, measuring tools and final assembly techniques. For more than 50 years, balancing and blueprinting has been an accepted and common practice for maximi

I'm not a huge fan of interactive books as the sounds often seem superfluous, if not downright distracting. But, this book is comprised of five short songs with Thomas-related lyrics you can sing to the tunes of "The Wheels on the Bus," "Mary Had a Little Lamb," "She'll Be Coming 'Round the Mountain," "Down by

---

the Station," and the title tune, which I think is a "Thomas" original. Thomas is on every page with whichever friend is the subject of that song. The book is a nice size for a toddler to handle; perfect for the 18+ months age recommendation, although you certainly could use it with a younger child. And, each song plays in its entirety even if your little one presses another button before it's finished.
