A "powerful and original" (The Times) historical saga that follows the quest for identity, redemption and home in the wake of World War II. One night in autumn 1944, a gunshot echoes through the alleyways of a small town in occupied Poland. An SS officer is shot dead by a young Polish Jew, Margarita Ejzenstain. In retaliation, his commander orders the execution of thirty-seven Poles--one for every year of the dead man's life. First hidden by a sympathetic German couple, Margarita must then flee the brutal advance of the Soviet army with her newborn baby. So begins a

thrilling panorama of intermingled destinies and events that reverberate from that single act of defiance. *Kingdom of Twilight* follows the lives of Jewish refugees and a German family resettled from Bukovina, as well as a former SS officer, chronicling the geographical and psychological dislocation generated by war. A quest for identity and truth takes them from refugee camps to Lübeck, Berlin, Tel Aviv, and New York, as they try to make sense of a changed world, and of their place in it. Hypnotically lyrical and intensely moving, Steven Uhly's epic novel is a finely nuanced yet shattering exploration of universal themes: love, hatred, doubt, survival, guilt, humanity, and redemption.

In 1986, after owning eleven BMWs in three years, Rob Siegel sent an unsolicited article to *Roundel*, the magazine of the BMW Car Club of America. Little did he know that it would kick

off 35 years of do-it-yourself automotive writing, and that his monthly column *The Hack Mechanic?* would attract a community of like-minded enthusiasts who, like Rob, try to come up with creative workarounds to keep their cars running without taking them to the dealer every time they hiccup. More than just "use 10mm wrench on bolt B" instructions, though, the columns have always been small journeys into passion and problem solving, philosophy lessons disguised as a repair articles, and short stories about getting into and hopefully out of automotive trouble. *The Best Of The Hack Mechanic?* is a selection of these pieces, including ones on how to buy a vintage BMW and not get burned, the most creative way possible to lock your keys in a running car, why car folks will do just about anything to avoid buying a family minivan when the money obviously would be so much better spent on "something fun," why a car nut really does need seven cars, why the odds of having a car start is often inversely proportion to the number of cars in the driveway, why finding one of his father's tools is enough to make Rob cry, and why working on your car feels so damned good, all written in Rob's *Hack Mechanic* voice that hovers somewhere between J.D. Salinger, Bill Bryson, and David Sedaris. Informative, irreverent, and poignant, *The Best Of The Hack Mechanic?* will have you

hoping Rob has another 35 years of columns in him.

A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and

stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ’ applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Professional automobile racing has always been dominated by

sanctioning bodies whose main goal was to ensure competition.

That has meant seeing that cars are well matched--in body shape or chassis/engine combinations or engine size. But what about an all-out competition, in which one team's idea of the fastest race car could be pitted against another 's, regardless of mechanical "parity" ? This was what the International Motor Sports Association 's (IMSA) Grand Touring Prototypes (GTP) race series was about. The Series ran from 1981 to 1993, and it was one of the most exhilarating racing experiences of all time. This book is the first to profile the amazing machines that resulted from the GTP 's flat-out competition among different--and passionate--ideas about what might be the fastest way around a track: the V-12 with its better ground-effect tunnels but higher center of gravity (CG); the flat six with its low CG but severely-restricted ground-effect tunnels; and others that employed elaborate wings and air dams. Here are the people behind this engineering free-for-all, the culmination of almost a century of automobile racing experience. And here are eighteen of the most competitive vehicles they designed. Using photography, diagrams, drawings and first-person accounts from the men who built them, Inside IMSA's Legendary GTP Race Cars offers a detailed look at the technology that drove some of the world 's most exciting race cars, the likes of which may never be seen again.

For over 25 years Rob Siegel has written a monthly column called "The Hack Mechanic" for the BMW Car Club of America's magazine Roundel. In Memoirs of a Hack Mechanic, Rob Siegel shares his secrets to buying, fixing, and driving cool cars without risking the kids' tuition money or destroying his marriage. And that's something to brag about considering the dozens of cars, including twenty-five BMW 2002s, that have passed through his garage over the past three decades. With a steady dose of irreverent humor, Memoirs of a Hack Mechanic blends car stories, DIY advice, and cautionary tales in a way that will resonate with the car-obsessed (and the people who love them).

When China opened its doors to the West in the late 1970s, Western businesses jumped at the chance to sell their products to the most populous nation in the world. Boardrooms everywhere buzzed with excitement? a Coke

for every citizen, a television for every family, a personal computer for every office. At no other time have the institutions of Western capitalism tried to do business with a communist state to the extent that they did in China under Deng Xiaoping. Yet, over the decade leading up to the bloody events in and around Tiananmen Square, that experiment produced growing disappointment on both sides, and a vision of capturing the world's largest market faded. Picked as one of Fortune Magazine's "75 Smartest Books We Know," this updated version of Beijing Jeep, traces the history of the stormy romance between American business and Chinese communism through the experiences of American Motors and its operation in China, Beijing Jeep, a closely watched joint venture often visited by American politicians and Chinese leaders. Jim Mann explains how some of the world's savviest executives completely misjudged the business climate and recounts how the Chinese, who acquired valuable new technology at virtually no expense to themselves, ultimately outcapitalized the capitalists. And, in a new epilogue, Mann revisits and updates the events which constituted the main issues of the first edition. Elegantly written, brilliantly reported, Beijing Jeep is a cautionary tale about the West's age-old quest to do business in the Middle Kingdom.
