Humanitarian workers around the world struggle under dangerous conditions. Yet many do not have the technological tools readily available elsewhere to help them realize their mission to provide essential services and save lives. This book, the fruit of a historic conference, is a practical guide to current technologies that can help relief and humanitarian aid workers succeed. Designed to facilitate needed technology transfer to the humanitarian sector, the essays focus on areas where technology is underused and predict where new technological

advances may be applied to relief efforts. The essays cover essential areas: communications technology and infrastructure support and security. They describe how such technologies as personal identification and tagging systems, software radios, wireless networks, and computer-aided language translation can promote safety and manage large groups of people. Other essays outline new technological solutions to such challenges as mine removal, water purification, and energy generation. The contributors are: Kevin M. Cahill, Frank Fernandez, C.

Kumar Patel, Paul J. Kolodzy, Joseph Mitola III, Victor Zue, Jaime G. Carbonell, Stephen Squires, Joseph V. Braddock, Arthur L. Lerner-Lam, Ralph James, William L. Warren, and Regina E. Dugan.

This is the first book to combine classical vehicle dynamics with electronic control. The equation-based presentation of the theory behind vehicle dynamics enables readers to develop a thorough understanding of the key attribute to both a vehicle's driveability and its active safety. Supported by MATLAB tools, the key areas that affect vehicle

dynamics are explored including tire mechanics, the steering system, vehicle roll, traction and braking, 4WS and vehicle dynamics, vehicle dynamics by vehicle and human control, and controllability. As a professional reference volume, this book is an essential addition to the resources available to anyone working in vehicle design and development. Written by a leading authority in the field (who himself has considerable practical experience), the book has a unique blend of theory and practice that will be of immense value in this applications based field. Get a thorough understand of why vehicles respond they way they do with a

complete treatment of vehicle dynamics from theory to application Full of case studies and worked examples using MATLAB/Simulink Covers all variables of vehicle dynamics including tire and vehicle motion, control aspects, human control and external disturbances

This book presents the papers from the Internal Combustion Engines:

Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at

developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport

applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

The Oil and Gas Journal Butterworth-Heinemann

This new IFSTA manual details the training required of Company Officers according to NFPA® 1021, Standard for Fire Officer Professional Qualifications, 2014 Edition. The manual is divided into two sections

to make a clear distinction between the information needed for Fire Officer Level I and Fire Officer Level II. Both print and eBook formats are available. There is no shortage of issues that a company officer might face in the everyday operation of a fire company or unit. This manual addresses the wide range of topics and issues encountered by a company officer, from leadership and supervision to health and safety issues. Great attention was given to focus on the job performance

requirements of NFPA® 1021. The fifth edition of Fire and Emergency Services Company Officer builds on the previous edition of the manual while presenting the material in a more concise manner to make it easier for students to read and instructors to teach. By merging related topics, the number of chapters was reduced from 32 in the fourth edition to 17 in the new manual while preserving the material related to the NFPA® standard. The number of appendices was

reduced from 20 to 4 by removing information that can be found in other media. Along with reducing the volume of material from the fourth edition, the fifth edition of Fire and Emergency Services Company Officer offers several new features. The manual features a new look with IFSTA's single-column format and upgraded and updated curriculum components. Learning activities are included to help instructors present the material to their students. Case Histories open each

chapter to illustrate important lessons learned in the real world. Photographs, illustrations, and tables are included throughout the manual to illustrate key points and improve the overall instructional value of the material.

In the first volume, Killingly revealed the initial manufacturing emphasis in the town's villages. Killingly Revisited illustrates how the town survived after losing most of the textile industry, as it moved South, by actively seeking diversified commercial businesses. Within

these pages, the town's fascinating past is displayed as newly acquired vintage views are coupled with information recently uncovered from the Killingly Historical and Genealogical Society's newspaper archives and other reference materials. In celebration of 300 years as an incorporated Connecticut town, the society is sharing photographs of Killingly's mills, businesses, buildings, churches, schools, and cemeteries. There have been losses from devastating fires that changed the face of Main Street. New streets and roads were added as modes of transportation changed. There are also new views of citizens at work and play.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced

techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle.

All of these changes combine to produce optimal flow velocity through the engine for maximum power.

This book explores how ?the sharing economy models present opportunities and also pose challenges in achieving sustainable development at the base of the pyramid. Through a 3S Framework (sharing, socialization, and social intermediation) and Reformative-

Transformative classification, this book demonstrates how sharing economy models offer the potential for more inclusive and sustainable development. The book includes case studies on sharing economy models that offer products and services for free or at prices more affordable than traditional options, while also finding ways toward economic sustainability and inclusive growth. This book identifies how local resources, community social capital, and

bricolage could be leveraged in the development of sharing economy models that take into account the specificities of particular communities while ensuring that the solutions can be quickly modified and replicated. Further, this book highlights that sharing economy models leverage the digital revolution to take advantage of cheaper computational capacity and global connectivity, while rapidly adapting to engage with those that have less digital literacy at the base of the

pyramid. This edited book aims to present analyses of sharing economy models at the base of the pyramid, identifying characteristics that can be particularly important for sustainable development and barriers that would need to be overcome to realize its full potential. The chapters in this book are contributed by a wide range of academics and scholars who are experts in the field.
