Dreamed up by drivers trying to outdo each other on the mountain passes of Japan, the art of the sideways descent of a switchback-what Wired described as "the fishtailing ballet of burning rubber called drifting"-has made it to the United States in a big way. What began as a new kind of daredevil driving among teens has, over two decades, become a sanctioned sport, making its way across the Pacific through video games and magazines, anime and the Internet, to take root in California's fertile underground racing culture.

Drifting tells the story of drifting from its arrival on the West Coast to its emergence as the hottest form of motorsport in the United States. A dramatic visual record of the sport in America that includes over 400 photos, the book also profiles the people, teams, techniques, web sites, publications, videos, and trends that have made drifting the phenomenon that it is today. For the curious newcomer, author Antonio Alvendia's introduction succinctly explains what drifting is, setting the stage for the thrilling automotive drama that then unfolds. For the veteran drifting fan, this book is the first illustrated book on the latest motorsport to conquer the world.

## Books

In *Comeback*, Pulitzer Prize-winners Paul Ingrassia and Joseph B. White take us to the boardrooms, the executive offices, and the shop floors of the auto business to reconstruct, in riveting detail, how America's premier industry stumbled, fell, and picked itself up again. The story begins in 1982, when Honda started building cars in Marysville, Ohio, and the entire U.S. car industry seemed to be on the brink of extinction. It ends just over a decade later, with a remarkable turn of the tables, as Japan's car industry falters and America's Big Three emerge as

formidable global competitors. *Comeback* is a story propelled by larger-than-life characters -- Lee Iacocca, Henry Ford II, Don Petersen, Roger Smith, among many others -- and their greed, pride, and sheer refusal to face facts. But it is also a story full of dedicated, unlikely heroes who struggled to make the Big Three change before it was too late. *Consumer Behavior* Pen and Sword Aviation MIG (metal inert gas) welding, also known as gas metal arc welding (GMAW), is a key joining technology in manufacturing. The photos in this edition are black and white. When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embrace what has become known as the sport compact--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And

by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital

In this riveting critique of the Fleet Air Arm's policy across two world wars, former FAA Fighter Pilot Henry Adlam charts the course of its history from 1912 to 1945, logging the various milestones, mistakes and successes that characterized the service history of the Fleet Air Arm. Offering

---

criticism on the service hierarchies that made up the Fleet, backed up by his having served in six Carriers and flown from them in all five theaters of sea warfare during five years of the Second World War, Adlam presents a highly entertaining and potentially controversial study which is sure to appeal to a wide array of aviation enthusiasts. Adlam charts the catalogue of errors that blighted the history of the Naval Air Service, which followed the disastrous decision in April 1918 to transfer the whole of the Air Service of the Royal Navy to form the new RAF. The main and overriding criticism that

the author finds with the Fleet Air Arm lies in the manner in which it was led. Adapting the oft-quoted "Lions led by Donkeys" description of the British Army, Adlam describes the activities of the Fleet Air Arm in the Second World War as the result of "Sea Eagles led by Penguins" practices, when experienced pilots were led into battle by senior members of the Navy who possessed little or no flying experience. This led to a whole host of disasters costing many lives amongst flight personnel. Adlam charts the errors that blighted the history of the Fleet Air Arm and shows how its recovery

---

and the triumphant turnaround of its fortunes were all the more remarkable. Taking the reader on a journey from inception during First World War service, throughout all the many disasters and successes that followed between the Wars and on into the Second World War and beyond, this book offers engaging new insights and a degree of critical candor that set it apart from other Fleet Air Arm histories currently available on the market. Oudry's Painted Menagerie

In the 1720s and 1730s, Jean-Baptiste Oudry established himself as the preeminent painter in France of hunts,

animals, still lifes, and landscapes. Oudry 's Painted Menagerie focuses on a suite of eleven life-size portraits of exotic animals from the royal menagerie at Versailles, painted by Oudry between 1739 and 1752. These paintings eventually found their way into the ducal collection in Schwerin, Germany. Among them is the magnificent portrait of Clara, an Indian rhinoceros who became a celebrity in mid-eighteenth-century Europe. Her portrait has been out of public view for more than a century, and it is presented here in its newly conserved state.
