Research & Education
Association (REA) is an
organization of educators,

specializing in various
academic fields. Founded in
1959 with the purpose of
disseminating the most
recently developed scientific
information to groups in
industry, government, high
schools, and universities,
REA has since become a
successful and highly
respected publisher of study
aids, test preps, handbooks,
and reference works. REA's
Test Preparation series
includes study guides for all
academic levels in almost
all disciplines. Research &
Education Association
publishes test preps for
students who have not yet
completed high school, as
well as high school students
preparing to enter college.
Students from countries
around the world seeking to
attend college in the United
States will find the
assistance they need in
REA's publications. For
college students seeking
advanced degrees, REA
publishes test preps for
many major graduate school
admission examinations in a
wide variety of disciplines,
including engineering, law,
and medicine. Students at
every level, in every field,
with every ambition can find
what they are looking for
among REA's publications.
While most test preparation
books present practice tests
that bear little resemblance
to the actual exams, REA's
series presents tests that
accurately depict the official
exams in both degree of

difficulty and types of questions. REA's practice tests are always based upon the most recently administered exams, and include every type of question that can be expected on the actual exams. REA's publications and educational materials are highly regarded and continually receive an unprecedented amount of praise from professionals, instructors, librarians, parents, and students. Our authors are as diverse as the fields represented in the books we publish. They are well-known in their respective disciplines and serve on the faculties of prestigious high schools, colleges, and universities throughout the United States and Canada.

PREFACE This book provides an accurate and complete representation of the Advanced Placement

Examination in Chemistry. Our six practice exams are based on the most recently administered Advanced Placement Chemistry Exams. Each exam is three hours in length and includes every type of question that can be expected on the actual exam. Following each exam is an answer key complete with detailed explanations designed to clarify and contextualize the material. By completing all six exams and studying the explanations which follow, you can discover your strengths and weaknesses and thereby become well prepared for the actual exam. The formulas and tables for the AP Chemistry Exam can be found at the back of this book, beginning on page 417. You will be provided these formulas and tables when you take the actual exam. You should also use this material when

taking the practice tests in this book. ABOUT THE TEST The Advanced Placement Chemistry Examination is offered each May at participating schools and multi-school centers throughout the world. The Advanced Placement Program is designed to allow high school students to pursue college-level studies while attending high school. The participating colleges, in turn, grant credit and/or advanced placement to students who do well on the examinations. The Advanced Placement Chemistry course is designed to be the equivalent of a college introductory chemistry course, often taken by chemistry majors in their first year of college. Since the test covers a broad range of topics, no student is expected to answer all of the questions correctly. The

exam is divided into two sections: 1) Multiple-choice: Composed of 75 multiple-choice questions designed to test your ability to recall and understand a broad range of chemical concepts and calculations. This section constitutes 45% of the final grade and you are allowed 90 minutes for this portion of the exam. Calculators are not permitted for this section of the exam. 2) Free-response section: Composed of several comprehensive problems and essay topics. This section constitutes 55% of the final grade and the student is allowed 90 minutes for this portion of the exam. You may choose from the questions provided. These problems and essays are designed to test your ability to think clearly and to present ideas in a logical, coherent fashion. You can bring an electronic hand-
