George Washington ranks as one of the great military leaders in history. The character traits he exemplified, and the leadership skills he employed, enabled him to defeat what was then the world's most powerful nation. In this marvelous book, Mark McNeilly shows today's managers how they can learn from Washington's career--both his triumphs and setbacks--to succeed as leaders in

their chosen field. McNeilly paints vivid portraits of some of the crucial moments in Washington's military career, from the early debacle on Long Island Heights to the masterstroke at Trenton. There Washington, aided by his use of intelligence and disinformation, and by his great fortitude in the face of truly daunting conditions, routed the Hessians. McNeilly uses these stirring military encounters to underscore Washington's managerial genius: to persuade and inspire, to open up the decision-making process, to seize opportunities when they arise, to persevere when setbacks occurred, and to learn from his mistakes. Indeed, the true value of the book lies in McNeilly's brilliant ability to link military and business strategy, revealing that successful corporate leaders must possess many of the same traits that Washington did. Using examples from the NFL, Cadillac, Coke, Samsung, Embraer, IBM and others, McNeilly shows how business leaders can apply Washington's principles for success. This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that

society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.
