"The COPO Camaro was ushered into existence in the late '60s by Chevrolet dealers who were installing big-block engines in Camaros and taking them racing. Chevrolet management knew a good thing when they saw it and, tapping into GM's Central Office Production Order (COPO) system, began to outfit stock Camaros with essentially Corvette drivetrains. Then, upping the ante in 1969, Chevy built just 69 super-high-performance COPO Camaros with aluminum-block engines and they became instant classics. The result was a performance configuration that made history. Now, more than four decades later, Chevrolet has recreated the magic by building 69 2012 COPO Camaros intended for sportsman class drag racing competition. ... This behind-the-scenes story puts the new COPO Camaro into historical context and provides specifications for every one of the 69 units created."--Publisher's description.

If we lived in a liquid world, the concept of a "machine" would make no sense. Liquid life is metaphor and apparatus that discusses the consequences of thinking, working, and living through liquids. It is an irreducible, paradoxical, parallel, planetary-scale material condition, unevenly distributed spatially, but temporally continuous. It is what remains when logical explanations can no longer account for the experiences that we recognize as part of "being alive."Liquid Life references a third-millennial understanding of matter that seeks to restore the agency of the liquid soul for an ecological era, which has been

banished by reductionist, "brute" materialist discourses and mechanical models of life. Offering an alternative worldview of the living realm through a "new materialist" and "liquid" study of matter, Armstrong conjures forth examples of creatures that do not obey mechanistic concepts like predictability, efficiency, and rationality. With the advent of molecular science, an increasingly persuasive ontology of liquid technologies can be identified. Through the lens of lifelike dynamic droplets, the agency for these systems exists at the interfaces between different fields of matter/energy that respond to highly local effects, with no need for a central organizing system.Liquid Life seeks an alternative partnership between humanity and the natural world. It provokes a re-invention of the languages of the living realm to open up alternative spaces for exploration, including contributor Rolf Hughes' "angelology" of language, which explores the transformative invocations of prose poetry, and Simone Ferracina's graphical notations that help shape our concepts of metabolism, upcycling, and designing with fluids. A conceptual and practical toolset for thinking and

designing, liquid life reunites us
with the irreducible "soul
substance" of living things,
which will neither be simply
"solved," nor go away.
