Most of us believe that we are an independent, coherent self—an individual inside our head who thinks, watches, wonders, dreams, and makes plans for the future. This sense of our self may seem incredibly real but a wealth of recent scientific evidence reveals that it is not what it seems—it is all an illusion.In The Self Illusion, Bruce Hood reveals how the self emerges during childhood and how the architecture of the developing brain enables us to become social animals dependent on each other. Humans spend proportionally the greatest amount of time in childhood compared to any other animal. It's not only to learn from others, Hood notes, but also to learn to become like others. We learn to become our self. Even as adults we are continually developing and elaborating this story, learning to become different selves in different situations--the work self, the home self, the parent self. Moreover, Hood shows that this already fluid process--the construction of self--has dramatically changed in recent years. Social networking activities--such as blogging, Facebook, LinkedIn, and Twitter--are fast becoming socialization on steroids. The speed and ease at which we can form alliances and relationships are outstripping the same selection processes that shaped our self prior to the internet era. Things will never be the same again in the online social world. Hood offers our first glimpse into this uncharted territory.Who we are is, in short, a story of our self--a narrative that our brain creates. Like the science fiction movie, we are living in a matrix that is our mind. But Hood concludes that though the self is an illusion, it is an illusion we must continue to embrace to live happily in human society.

*The Autocar* Motorbooks  
When automotive manufacturers stuffed large V-8 engines into intermediate-size cars, the American muscle car was born. Built from 1964 on, the vast majority of these amazingly fast machines did not carry cutting-edge chassis and suspension systems, and now these cars are up to 50 years old. Today, owners do not have to settle for poor handling and ride quality. Muscle car and suspension expert Mark Savitske has built his business, Savitske Classic and Custom, on making muscle cars handle and ride at their best. With this updated edition, Savitske shows you what it takes to transform the handling of these high-horsepower machines. He explains the front and rear suspension geometry so you understand how it functions, and in turn, you realize how to get the most from a particular system. He also reveals the important aspects of spring rates, shock dampening, and ride height so you select the best spring and shock package for your car and application. He discusses popular high-performance tubular suspension arms and sway bars, so you can find the right combination of performance and adjustability. The suspension system has to operate as an integrated part of the car, so you're shown how to select best suspension package for a well-balanced and responsive car. He also discusses how to extract maximum performance from popular GM, Ford, and Mopar muscle cars. You can harness the potential performance potential of your muscle car and put much more power to the ground with critical chassis and suspension updates and products. A muscle car that carries modern suspension technology not only provides far better handling and ride comfort, but it is also much safer. How to Make Your Muscle Car Handle is the essential guide to unlocking the handling and performance potential of your muscle car. If you yearn for better handling, comfort, and performance for your muscle car, this is the book for you.
